Particle identification at LHCb: new calibration techniques and machine learning classification algorithms

Tuesday 10 April 2018 17:45 (20 minutes)

Particle identification (PID) plays a crucial role in LHCb analyses. Combining information from LHCb sub-detectors allows one to distinguish between various species of long-lived charged and neutral particles. PID performance directly affects the sensitivity of most LHCb measurements. Advanced multivariate approaches are used at LHCb to obtain the best PID performance and control systematic uncertainties. This talk highlights recent developments in PID that use innovative machine learning techniques, as well as novel data-driven approaches which ensure that PID performance is well reproduced in simulation.

Intended contribution length

20 minutes

Presenter: LUCIO MARTINEZ, Miriam (Universidade de Santiago de Compostela (ES))

Session Classification: Session 4
