

Search for the Lepton Flavour Violating decay $B \rightarrow e\mu$

Thursday 5 April 2018 16:30 (15 minutes)

Recent hints of lepton flavour universality violation motivate searches for lepton flavour violating B decays.

The LHCb experiment is particularly suited for these searches due to its large acceptance,

high trigger efficiencies and excellent tracking and particle identification capabilities.

Recent results from LHCb on searches for the lepton flavour violating decays $B(s) \rightarrow e\mu$ will be presented.
