

# HIE-LINAC: accelerator status and a proposal for the experimental lines

M. Pasini on behalf of the HIE-ISOLDE study team  
CERN BE-RF and Instituut voor Kern- en Stralingsfysica, K. U. Leuven

# Overview

- + The HIE-linac: a SC linac for Radioactive Ion Beams @ ISOLDE
- + R&D activity
- + Status of the project
- + Beam line proposal
- + Summary

# HIE-ISOLDE Project: SC-linac

- + SC-linac between 1.2 and 10 MeV/u (energies below 1.2 MeV are achievable but the machine is not optimized)
- + 32 SC QWR (20 @  $\beta_0=10.3\%$  and 12 @  $\beta_0=6.3\%$ )
- + Energy fully variable; energy spread and bunch length are tunable.
- +  $2.5 < A/q < 4.5$  limited by the room temperature cavity
- + 16.02 m length (without matching section)
- + New beam transfer line to the experimental stations

# QWR cavities (Nb sputtered)

Low  $\beta$

High  $\beta$

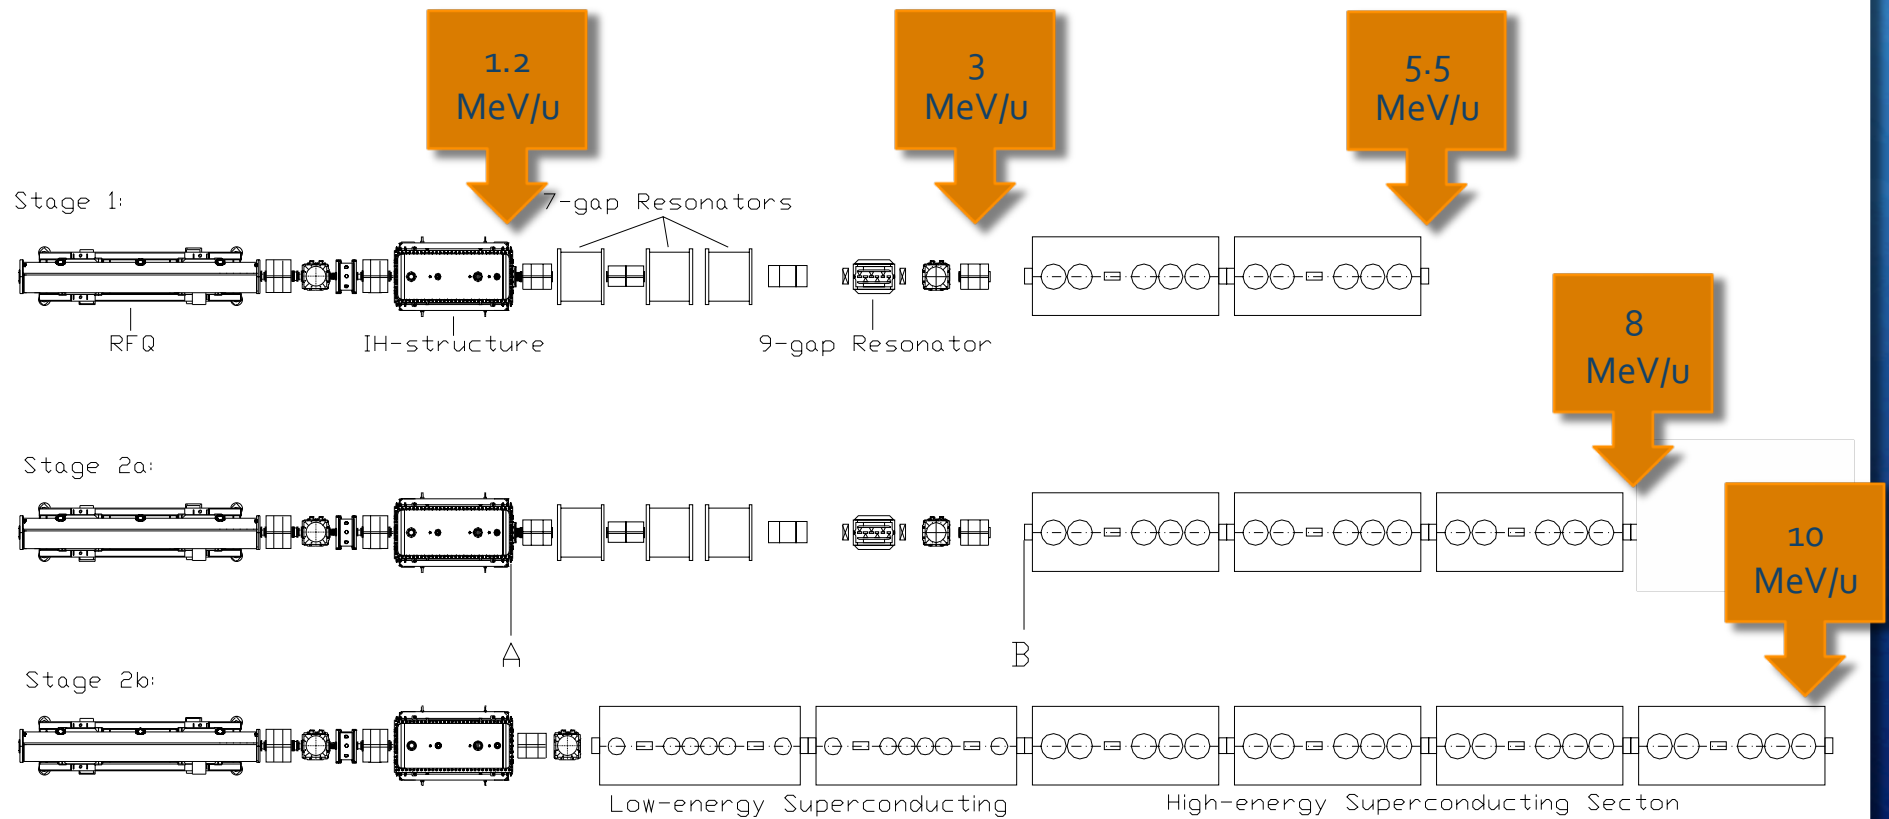

Table 1: Cavity design parameters

Cavity	Low $\beta$	high $\beta$
No. of Cells	2	2
f (MHz)	101.28	101.28
$\beta_0$ (%)	6.3	10.3
Design gradient $E_{acc}$ (MV/m)	6	6
Active length (mm)	195	300
Inner conductor diameter (mm)	50	90
Mechanical length (mm)	215	320
Gap length (mm)	50	85
Beam aperture diameter (mm)	20	20
$U/E_{acc}^2$ (mJ/(MV/m) <sup>2</sup> )	73	207
$E_{pk}/E_{acc}$	5.4	5.6
$H_{pk}/E_{acc}$ (Oe/MV/m)	80	100.7
$R_{sh}/Q$ ( $\Omega$ )	564	548
$\Gamma = R_s \cdot Q_0$ ( $\Omega$ )	23	30.6
$Q_0$ for 6MV/m at 7W	$3.2 \cdot 10^8$	$5 \cdot 10^8$
TTF max	0.85	0.9
No. of cavities	12	20

# HIE-ISOLDE LINAC - layout

## 3 stages installation

# R&D activity

- + High  $\beta$  cavity prototype
  - + Copper substrate manufacturing
  - + Chemical etching
  - + Nb sputtering
- + RF – Beam dynamics studies
- + RF sub-system prototypes
  - + Tuner
  - + Power coupler
- + SC solenoid prototype
- + Cryomodule design
- + Infrastructure design

# High $\beta$ section Beam Dynamics studies

## + Beam Port shape studies

# Beam Lines proposal

# Beam Parameters

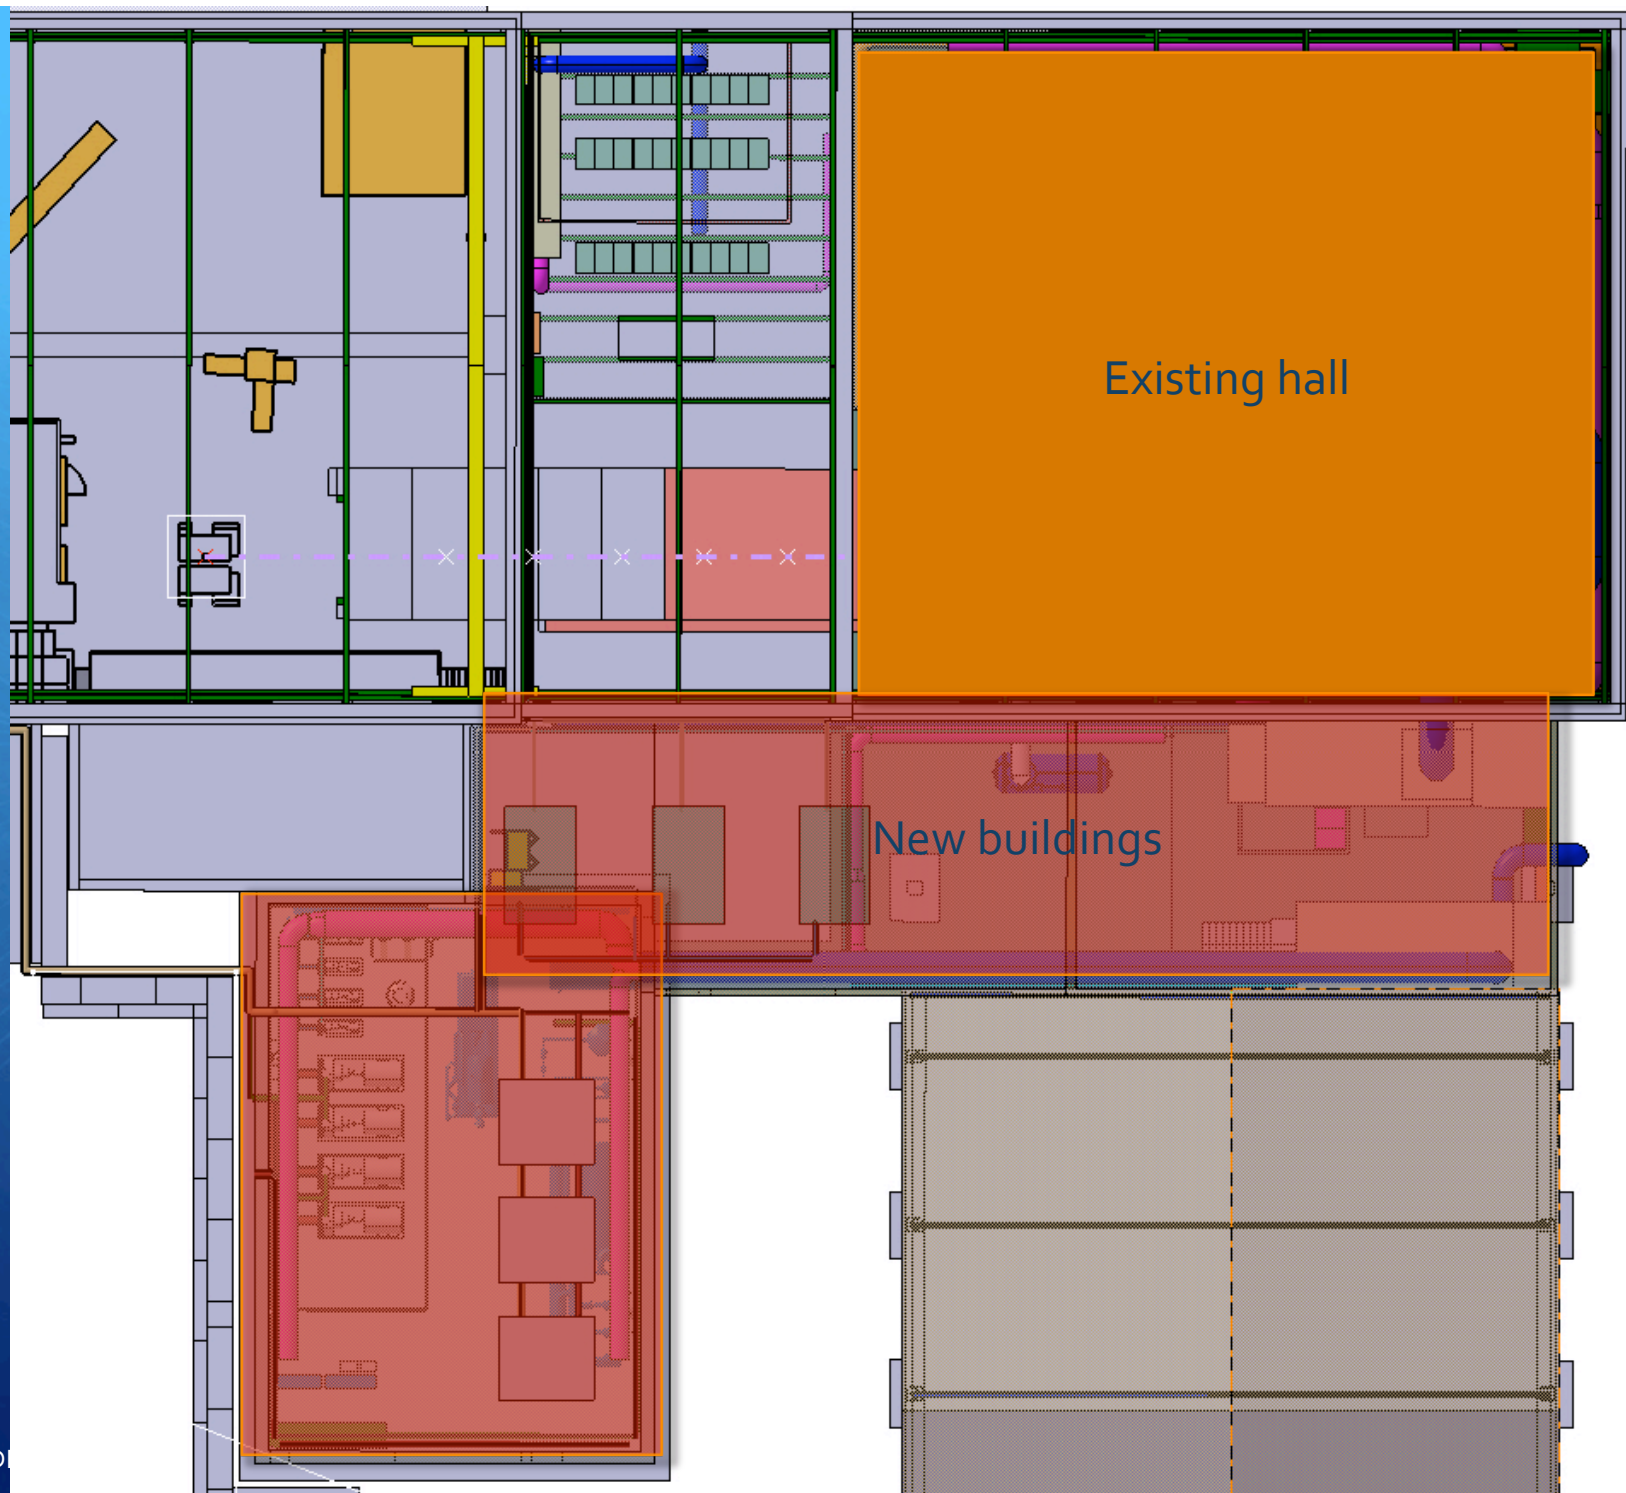

- + In each target position we can achieve a beam spot of 2mm diameter with  $\pm 5\text{mrad}$  divergence (double focus, symmetric on horizontal and vertical plane) NB. This is at 10 MeV/u
- + The focus matching section is telescopic so we can manage to have the target at different distances from the last quadrupole
- + So far there was no specification given in term of longitudinal parameters, i.e. beam energy spread and beam (micro)bunch length.

## To be noted...

- + The transfer line will be the first thing we will install in order to minimize the down time of the facility. It must allow to transport the beam to the new experimental position even in the case that the accelerator will not completely be built.
- + We need a decision over the next year on which HEBT to build first and which experiment will be installed (we need to know the footprint, special requirement for radioprotection, and all other parameter that can influence the layout of the hall)
- + New experiments that requires “special” beam parameters and need a well collimated beam should go through a beam dynamics review in order to technically verify the feasibility of the set-up.

# General infrastructure

# Summary

- + Cavity prototype almost completed. Tests to be done @ TRIUMF as soon as possible
- + Beam dynamics study for the high energy section completed.
- + Study of the beam lines to experiments has started. Need to have confirmation on beam parameters that need to be delivered.
- + Study of the general infrastructure and machine integration almost completed.
- + For more info concerning the Linac please check out the website:  
<http://hie-isolde.web.cern.ch>

# Acknowledgments

- + HIE-ISOLDE design group
- + ISOLDE physics and operation group
- + LNL-INFN and TRIUMF
- + Cockcroft Institute, Liverpool and Manchester University
- + K.U. Leuven
- + I would like to express my sincere gratitude to all those at CERN that have contributed and supported this activity

**Thank you**
