

HIE-LINAC: accelerator status and a proposal for the experimental lines.

Thursday, 19 November 2009 09:50 (20 minutes)

The HIE-LINAC R&D phase has started in 2008 with the prototyping of the “high” beta SC QWR cavity and detailed beam dynamics studies. We report here on the latest achievement in term of the cavity prototyping, the results of the beam optics studies and a proposal for the beams lines for the future experimental facilities.
