

COMPASS future physics program

Thursday 9 November 2017 09:30 (25 minutes)

The M2 beam line at CERN is a unique hadron and muon facility. COMPASS has submitted a proposal requesting the extension of the COMPASS-II program in and beyond 2021. A Letter of Intent will be submitted by the end of 2017 suggesting a rich physics program to explore hadron structure using conventional meson beams, muon beams, and finally RF-separated hadron beams to enhance the fraction of beam kaons and anti-protons.
