OFF-AXIS MEASUREMENTS

<http://cds.cern.ch/record/2284748>

- ▶ flux studies from High Pressure TPC R&D done with TOF
- ▶ detector off-axis and absorber in front of the target
 - ▶ lower pion to proton ratio
 - ▶ lower beam fluxes

best condition for HP-TPC purposes : 1m off-axis at 13m from a 35cm thick plastic absorber

THE NORTH AREA (EXTENSION)

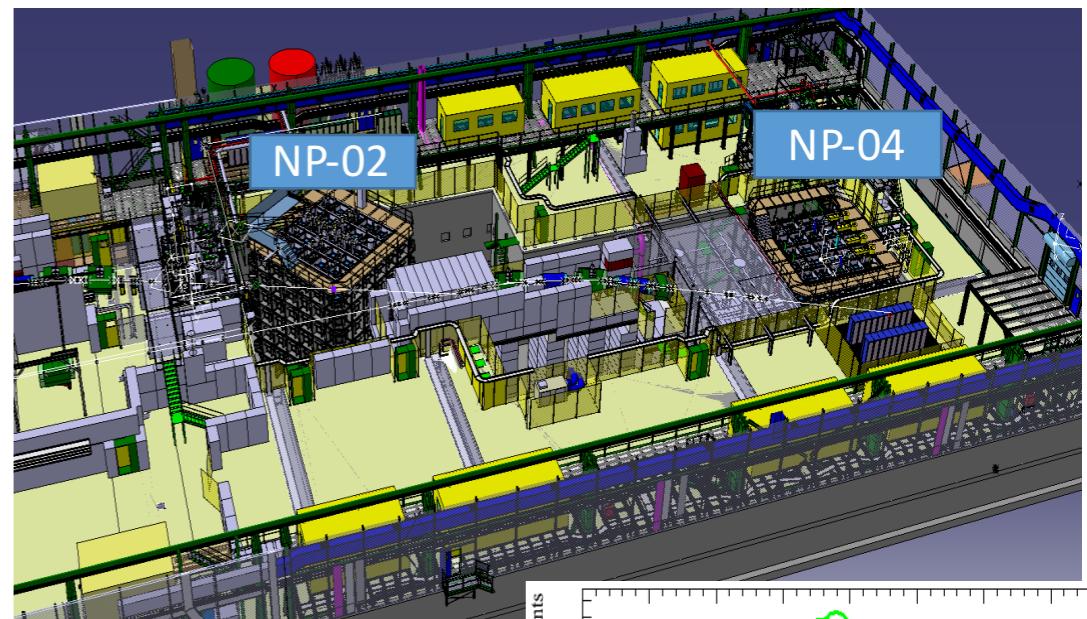

- ▶ Dedicated beam lines for protoDUNE detectors, extension of the H2 and H4
- ▶ Very low energy (VLE) beams using a secondary target $\sim 0.4 \text{ GeV} \rightarrow 7(\text{H4}) 12(\text{H2}) \text{ GeV}$

BEAM INSTRUMENTATION

- ▶ Some instrumentation available depending on the beam line and zone:
 - ▶ beam profile, intensity monitor (scintillators and analog/delay multi wire chambers)
 - ▶ FISC scanners (motorised scintillators filament angular measurements)
 - ▶ Cherenkov gas counters (tagging particle species)
 - ▶ EM calorimeters

HOW TO SUBMIT A BEAM REQUEST

- ▶ Call for beam requests for 2018 opened today
 - ▶ short period (1 week at SPS, 2 weeks at PS): submit a written proposal to SPS coordinator by 18th November
 - ▶ long period : submit a proposal to SPSC (next in January)
 - ▶ parasitic runs are also possible (conditions depending on the area)
