Protection of underground areas and He release to surface

Tuesday, 26 January 2010 17:15 (10 minutes)

The presentation reviews the status of the separation of underground areas from the LHC tunnel and the present pressure release paths in case of a large He leak. We also discuss the shortfalls of the present situation and present the strategy for the upgrade/consolidation of the He release in case of a MCI.

Presenter: WEISZ, Sylvain

Session Classification: Session 4 - Safety for Personnel Underground - He Evacuation
