Safety consolidation and improvements in the experiments

Tuesday 26 January 2010 17:55 (15 minutes)

The LHC experiments started successfully and safely in November 2009 together with the LHC machine. Significant improvements to the safety of the underground experimental areas have been implemented after the accident of the 19.09.08.

Nevertheless, some safety improvements could not have been finalized and therefore compensatory measures are put in place for the 2009/10 LHC run. This presentation will focus on the consolidation efforts for safety to be done at latest during the next long shut down.

Presenter: SCHAEFER, Christoph

Session Classification: Session 4 - Safety for Personnel Underground - He Evacuation
