Acknowledgements

We wish to acknowledge the extraordinary effort from the FCC Collaboration in production this Conceptual Design Report. We wish to thank the International Advisory Committee members (list of names) for their support in the preparation, review and consolidation of this work. For their constructive comments and guidance, we would like to thank our reviewers: list of names. For their continued support in administrative matters, we wish to thank the secretariat teams of numerous institutes, namely tbd, tbd, tbd. We also would like to thank x, y and z for their invaluable technical assistance in the preparation of this document. Finally, we wish to thank the CERN management for their strong support and encouragement.

Contents

| | |
|--|-----------|
| FCC Collaboration | 3 |
| Executive Summary | 5 |
| 1 Physics Discovery potential | 9 |
| 1.1 Introduction | 9 |
| 1.2 Precision electroweak measurements | 9 |
| 1.3 The Higgs Boson | 9 |
| 1.4 Rare processes | 9 |
| 1.5 New particle discovery potential | 9 |
| 1.6 Requirements for the collider | 9 |
| 1.7 Requirements for the detector | 9 |
| 1.8 Requirements for theory | 10 |
| 2 Collider Design and Performance | 11 |
| 2.1 Design goals and basic choices | 11 |
| 2.2 Parameter Optimisation | 11 |
| 2.3 Design Challenges and Approaches | 11 |
| 2.4 Optics Design and Beam Dynamics | 11 |
| 2.5 Machine detector interface | 11 |
| 2.6 Collective effects | 11 |
| 2.7 Energy calibration and polarization | 12 |
| 2.8 Injection and extraction | 12 |
| 2.9 Machine performance and operation aspects | 12 |
| 2.10 Monochromatization | 12 |
| 2.11 Running at other energies | 12 |
| 3 Collider Technical Systems | 13 |
| 3.1 Main RF systems including staging and RF R and D | 13 |
| 3.2 Vacuum system and e-cloud mitigation | 13 |
| 3.3 Beam instrumentation and feedback systems | 13 |
| 3.4 Beam dumping, beam injection and beam transfer systems | 13 |
| 3.5 Other key technologies | 13 |
| 3.6 Radiation Environment | 13 |
| 4 Civil Engineering | 15 |
| 4.1 Requirements and Design Considerations | 15 |
| 4.2 Layout and Placement | 15 |
| 4.2.1 Collider Layout | 15 |
| 4.2.2 Collder Placement | 15 |
| 4.3 Underground Structures | 15 |

| | | |
|----------|--|-----------|
| 4.3.1 | Tunnels | 15 |
| 4.3.2 | Shafts | 15 |
| 4.3.3 | Alcoves | 15 |
| 4.3.4 | Experiment Caverns | 15 |
| 4.3.5 | Service Caverns | 15 |
| 4.4 | Surface Points | 15 |
| 4.4.1 | Experiment Surface Site | 15 |
| 4.4.2 | Technical Surface Site | 15 |
| 4.4.3 | Access Roads | 15 |
| 5 | Technical Infrastructures | 17 |
| 5.1 | Requirements and Design Considerations | 17 |
| 5.2 | Piped Utilities | 17 |
| 5.3 | Heating, Ventilation, Air Condition, Cooling | 17 |
| 5.4 | Electricity Distribution | 17 |
| 5.5 | Emergency Power | 17 |
| 5.6 | Cryogenic System | 17 |
| 5.6.1 | Overview | 17 |
| 5.6.2 | Proximity Cryogenics and Heat Loads | 17 |
| 5.6.3 | Cryogenic Plants | 17 |
| 5.6.4 | Cryogen Inventory and Storage | 17 |
| 5.7 | Equipment Transport and Handling | 17 |
| 5.8 | Person Transport | 17 |
| 5.9 | Geodesy, Survey and Alignment | 17 |
| 5.10 | Communications, Computing and Data Services | 17 |
| 5.11 | Safety and Access Management Systems | 17 |
| 6 | Injector complex | 19 |
| 6.1 | Electron gun | 19 |
| 6.2 | Linac | 19 |
| 6.3 | Positron source and capture system | 19 |
| 6.4 | Damping ring | 19 |
| 6.5 | Energy and bunch compressors | 19 |
| 6.6 | Pre-booster | 19 |
| 6.7 | Booster | 19 |
| 6.8 | Transfer Lines | 19 |
| 7 | Experiments and Detectors | 21 |
| 7.1 | Experimental environment | 21 |
| 7.2 | The luminometer | 21 |
| 7.3 | The vertex detector | 21 |
| 7.4 | The all-silicon detector design | 21 |

| | | |
|-----------|--|-----------|
| 7.5 | The IDEA concept | 21 |
| 7.6 | Magnet System | 21 |
| 7.7 | Constraints on readout systems | 21 |
| 7.8 | Infrastructure Requirements | 21 |
| 8 | Safety | 23 |
| 8.1 | Requirements and Approach Considerations | 23 |
| 8.1.1 | Legal Requirements | 23 |
| 8.1.2 | Hazard and Risk Management Concept | 23 |
| 8.2 | Occupational Health and Safety | 23 |
| 8.3 | Radiation Protection | 23 |
| 9 | Energy Efficiency | 25 |
| 9.1 | Requirements and Design Considerations | 25 |
| 9.2 | Power Consumption | 25 |
| 9.3 | Energy Management and Saving | 25 |
| 9.4 | Waste Heat Valorisation | 25 |
| 10 | Environment | 27 |
| 10.1 | Requirements and Approach Considerations | 27 |
| 10.1.1 | Legal Requirements | 27 |
| 10.1.2 | Environmental Compatibility Management Concept | 27 |
| 10.2 | Environmental Impacts | 27 |
| 10.2.1 | Radiological Impacts | 27 |
| 10.2.2 | Conventional Impacts | 27 |
| 10.3 | Waste Management | 27 |
| 10.3.1 | Radioactive Waste Management | 27 |
| 10.3.2 | Conventional Waste Management | 27 |
| 11 | Education, Economy and Society | 29 |
| 11.1 | Requirements and Approach Considerations | 29 |
| 11.2 | Host State Realization Concept | 29 |
| 11.2.1 | France | 29 |
| 11.2.2 | Switzerland | 29 |
| 11.3 | Socio-Economic Opportunities | 29 |
| 11.3.1 | Scientific Publications | 29 |
| 11.3.2 | The Value of Training | 29 |
| 11.3.3 | Opportunities for Industries | 29 |
| 11.3.4 | Cultural Effects | 29 |
| 11.3.5 | The Value of Knowledge | 29 |
| 12 | Strategic Research and Development | 31 |
| 12.1 | Strategic Considerations | 31 |

| | | |
|----------|---|-----------|
| 12.2 | Accelerator Related R&D | 31 |
| 12.3 | Detector Related R&D | 31 |
| 12.4 | Infrastructures Related R&D | 31 |
| 12.5 | Risks | 31 |
| | Appendices | 33 |
| A | Collider Parameter Tables | 33 |
| A | Collider | 33 |
| B | LHC as Injector | 33 |
| C | Superconducting SPS | 33 |
| B | Experiment Parameter Tables | 35 |
| C | Infrastructures Parameter Tables | 37 |
| A | Layout | 37 |
| B | Civil Engineering | 37 |
| C | Resource Use | 37 |
| | Glossary | 37 |
| | References | 37 |
