Role

- ROOT is the warp core of HEP data analysis
 - I/O
 - Math
 - Visualization
 - Interactivity, analysis, documentation
- Not guaranteed - there are competitors!

The Mission

- Need to convince:

- features
- robustness
- simplicity
- speed

- Good code + good code + good code.

Alive?

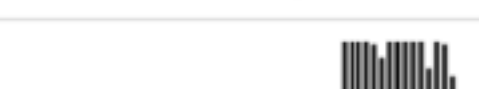

Very High Activity

- From OpenHub: “Activity level is relative to all projects on Open Hub. Only a small percentage of projects on Open Hub will display the Very High icon. Many important, highly regarded and popular projects may show lower activity levels”

Commits

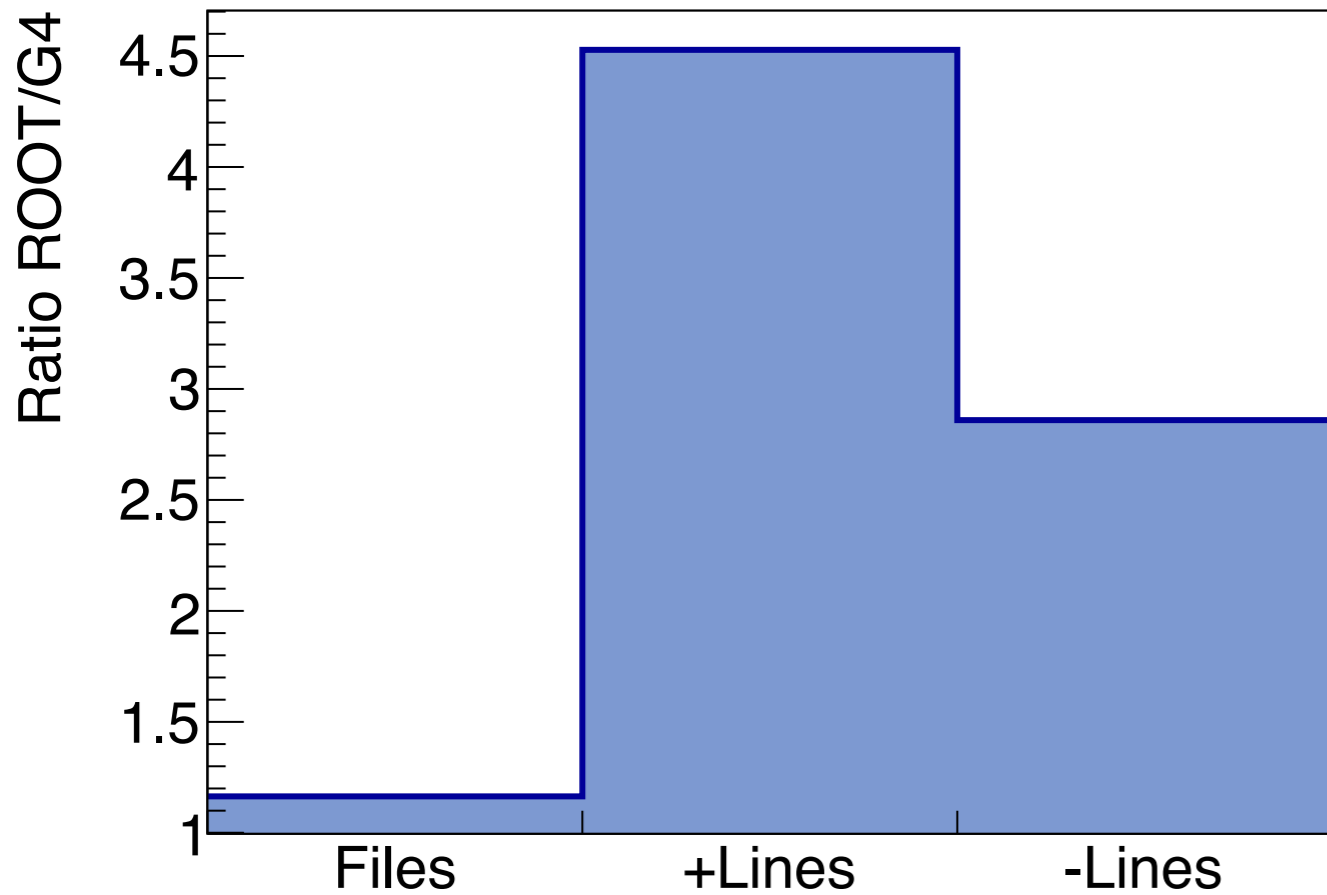

- Lots. Of. Work.

Productivity

ROOT/G4

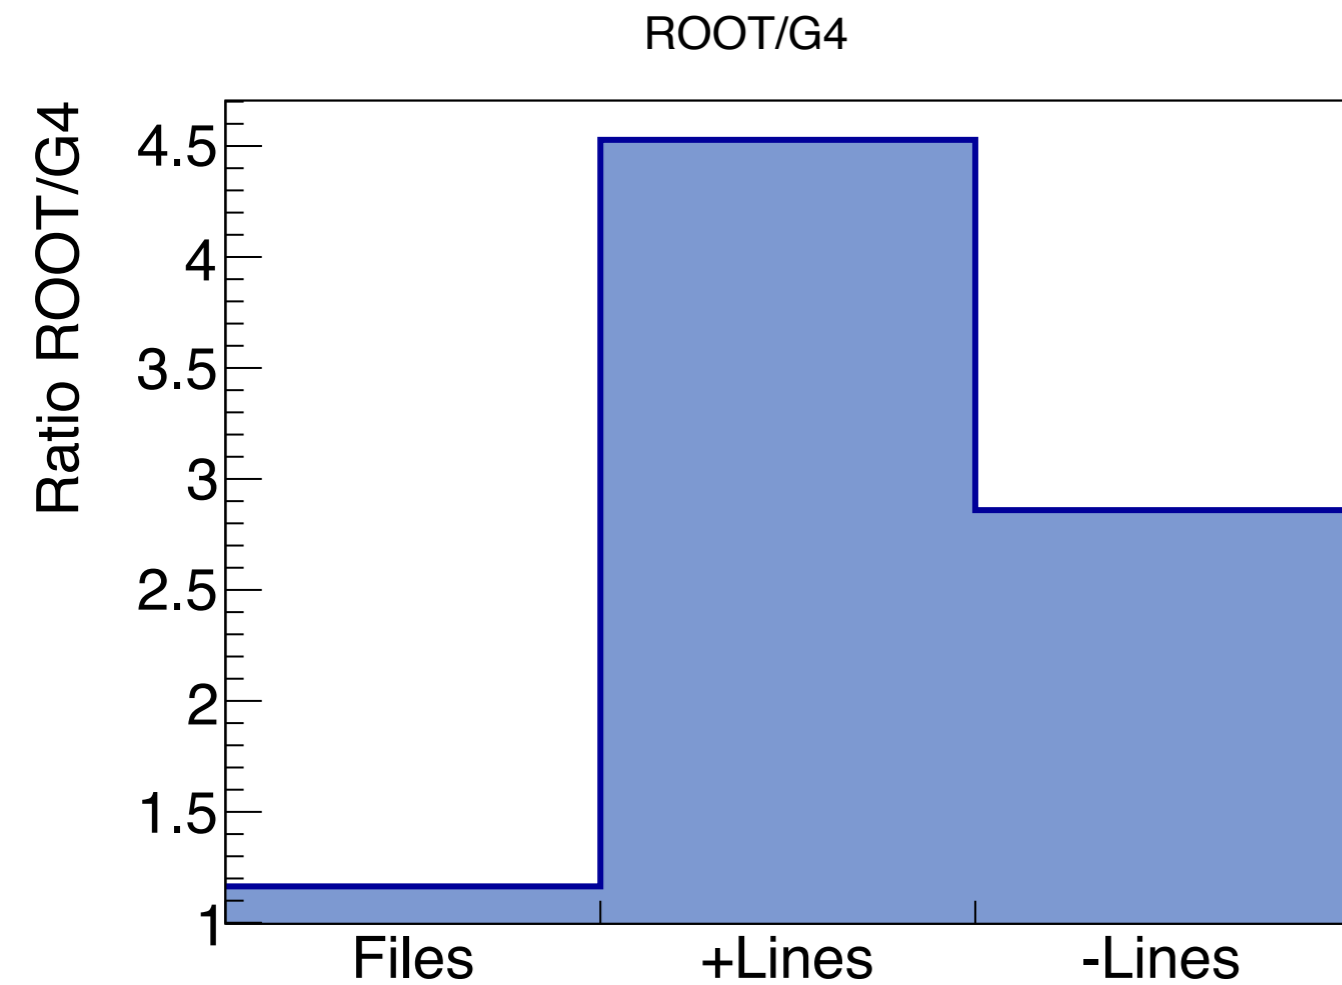

ROOT: v6-08..master without interpreter/llvm
G4: 10.02.p03..10.03.p03

Lines Of Code

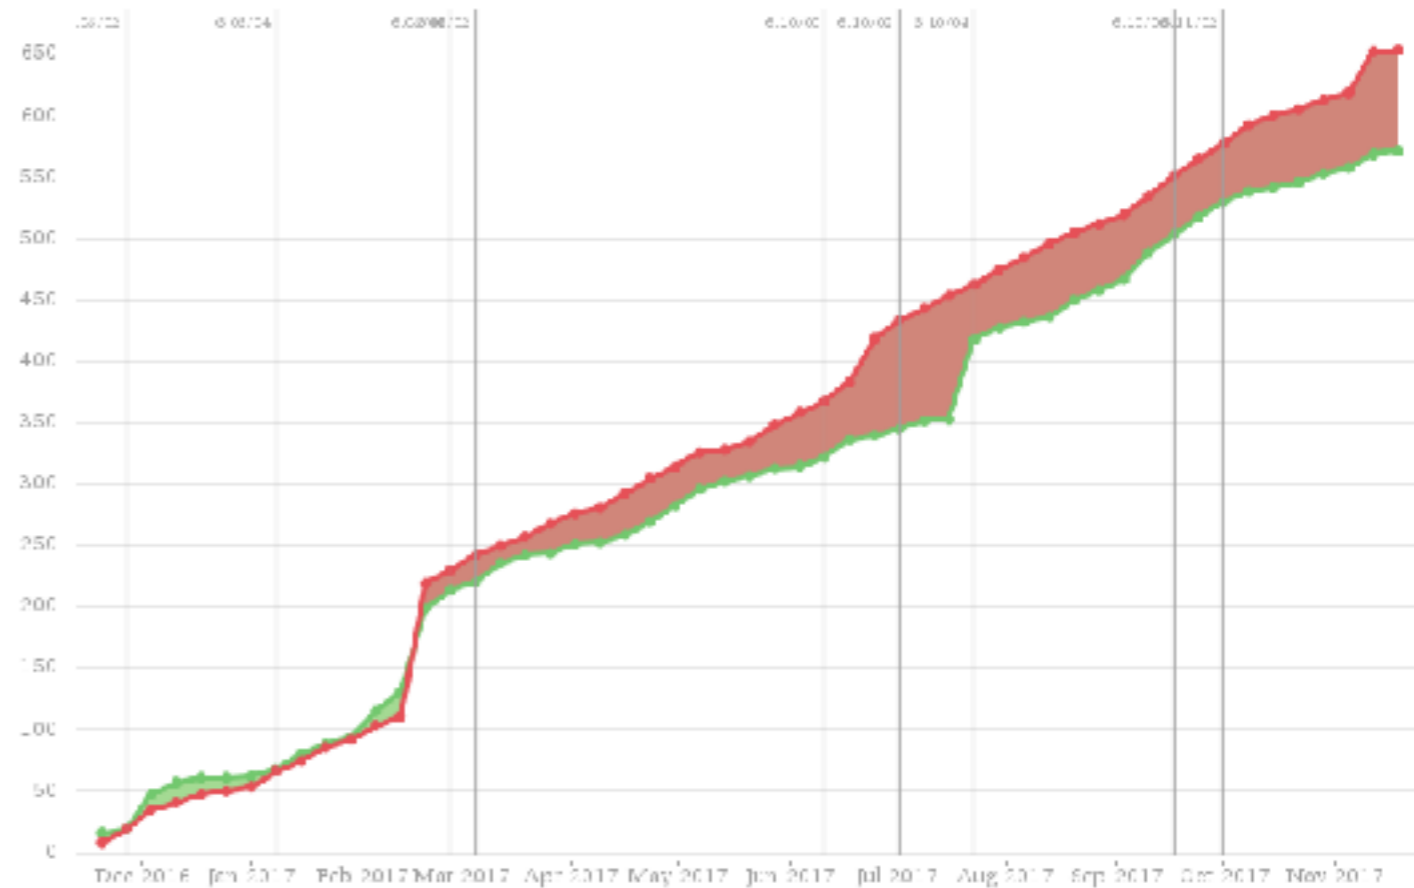

- But of course not all lines are equal...

Jira, Coverity

+ backlog of 600 issues

- 1230 open ROOT issues
- + Coverity (about 1000 issues)

Forum

- Almost 50 posts per day
- More and more users

Consequence: Focus!

- We have a lot of work to cope with:
design + discussions, coding, bugs, support, teaching
 - we are very productive, but at the limit
 - and even more is coming: new features, communication
- We must focus on ROOT's core parts:
 - those that arrive at users
 - math, I/O, graphics, interactive, analysis

Consequence: Focus!

People think focus means saying yes to the thing you've got to focus on. But that's not what it means at all. It means saying no to the hundred other good ideas that there are. You have to pick carefully.
