Networking Performance L2: Multimedia over the Internet

Thursday 11 October 2018 09:45 (1 hour)

The Internet is not only a network of computer resources but also a network of people cooperating to use these resources, in particular in professional scientific environment. Part of the collaborative tools scientists are increasingly using include audio and video systems. They place new challenging requirements on the networking systems. The class discusses these requirements and their consequences on the end-systems as well as within the underlying network.
