Singularity RPM

- singularity-2.3.2-0.1.1.osg34.el7 currently distributed from WLCG repo (http://linuxsoft.cern.ch/wlcg/centos7/x86_64/) built by OSG

- Everyone happy enough?

- *and / or* pursue EPEL for long-term?

  - EPEL version has ## extra patches: some are real things, some opinions of the packager (mostly not referencing upstream bugs as they should)

  - Not clear what we get, slow to validate patches for new versions
