

GridPP

UK Computing for Particle Physics

Transition to EGI

Neil Geddes

Science and Technology Facilities Council
e-Science

- Impact on T1 itself should be small
 - Difference between UKI ROC and UK NGI is not complex
 - No major reorganisations needed in next 18 months.
- UK risk of losing some key staff due to foreseen lower funding in EGI than EGEE.
 - ROC people have been important in keeping UK availability high.
- GridPP and NGS funding continues at current levels for another year
 - Should minimise disruption over the transition.
 - Risk losing up 50% of non T1 specific support staff from 2011

- T1 will integrate into the NGI in the same way as the ROC
 - End user of the services provided
 - Some members of the team working with wider deployment
- Assume WLCG operational meetings will continue
 - MB, GDB and daily ops calls...
- The main changes will be in the funding models/projects
 - Working group looking at needs and skills
 - Confident most of the mechanisms are already in place now
 - Moving to an NGI is principally a name shift
- Risk to ROC staffing generally
 - Lower EGI funding
 - GridPP and NGS end 2011
 - Follow on funding in process
