

New directions in B-anomalies model building

Thursday, 20 September 2018 17:45 (25 minutes)

Coherent new physics picture of B-anomalies (both) in charged and neutral current transitions, is a rather challenging task. I will review two directions which recently triggered some activity in the literature and are centered around (i) the Pati-Salam vector leptoquark, and (ii) the light sterile neutrino.

Presenter: GRELJO, Admir (Johannes Gutenberg-Universität Mainz)

Session Classification: Joint WG2 / WG3 Session
