

# Dilaton-Assisted composite Higgs model at LHC

*Friday, July 6, 2018 3:15 PM (15 minutes)*

We study a recently proposed dilaton-assisted composite Higgs model, which addresses a new solution to the Higgs naturalness problem, relying the scale symmetry of the dilator-Higgs effective theory. The model predicts a heavy  $U(1)$  axial vector boson and two massive, oppositely charged, pseudo Nambu-Goldstone bosons. We discuss the phenomenology of new particles, which might be accessible at LHC.
