

# Measurement of the Minimum Bias, Underlying Events and Double-Parton Scatterings at CMS

*Saturday 7 July 2018 10:00 (15 minutes)*

We present recent results on Minimum Bias, Underlying Events and Double Parton Scattering using data recorded by CMS detector at the LHC. The results on the measurement of the underlying event using leading tracks, jets, and Drell-Yan processes are presented. Double parton scattering is investigated in several final states including vector bosons and multi-jets, and the results are compared to other experiments and to MPI models tuned to recent underlying event measurements at CMS.
