

Study of hadronic processes in the energy interval from 2 GeV up to 3.08 GeV at BESIII.

Friday, July 6, 2018 8:15 PM (15 minutes)

500 pb⁻¹ of data have been collected by BESIII between 2.0 GeV and 3.08 GeV. Recent results on the line-shape of $e^+e^- \rightarrow \phi\pi\pi, K^+K^-, 2(K^+K^-), \phi\eta, \phi\eta', \omega\pi^0, \omega\eta$ are reported. Possible new resonances in these channels are studied, in particular the $\phi(2170)$, that may be the strange partner of the $Y(4260)$.
