

Evidence for Higgs boson production in decays to two b-quarks using the ATLAS detector

Thursday 5 July 2018 09:15 (15 minutes)

The analysis that studies VH process with H->bb decays is presented based on the 13 TeV pp collision data. A clear excess of the VH with H->bb process over the predicted background is shown providing evidence for such a process. In addition a search for VBF production in the same decay channel is presented.
