

Searches for light Higgs bosons at CMS

Thursday 5 July 2018 14:45 (15 minutes)

The searches for light pseudoscalar Higgs bosons pair produced from the decay of the 125 GeV Higgs boson and resulting in various final states (4μ , 4τ , $2\mu 2\tau$, $2b 2\tau$) and low mass Higgs bosons will be summarised. The analyses are performed using data collected with the CMS experiment at the LHC from pp collisions at centre-of-mass energies of 13 TeV.
