

Top quark properties measurements with the ATLAS detector

Friday, July 6, 2018 11:45 AM (15 minutes)

The top quark is the heaviest known fundamental particle. As it is the only quark that decays before it hadronizes, this gives the unique opportunity to probe the properties of bare quarks. This talk will focus on a few recent precision measurements of top quark properties in production and decay by the ATLAS Collaboration at center-of-mass energies of 8 TeV and 13 TeV.

Presenter: PETERS, Reinhild (University of Manchester (GB))

Session Classification: Top Quark and Electroweak Physics

Track Classification: Top Quark and Electroweak Physics
