

Measurements and combination of the weak mixing angle at the Tevatron and extraction of the W mass

Friday, July 6, 2018 4:45 PM (15 minutes)

We combine four measurements of the forward-backward charge asymmetry A_{FB} in $p\bar{p} \rightarrow Z/\gamma^* \rightarrow e^+e^-/\mu^+\mu^- + X$ events using $\sim 10 \text{ fb}^{-1}$ of $p\bar{p}$ data collected at $\sqrt{s} = 1.96 \text{ TeV}$ by the CDF and D0 detectors at the Fermilab Tevatron collider. A_{FB} is measured as a function of the invariant mass of the dilepton system to extract the effective weak mixing angle $\sin^2 \theta_{eff}^{lep}$. We discuss the combination of these measurements and present the indirect extraction of the W mass in the context of the standard model.

Presenter: Prof. HAN, Liang (University of Science and Technology of China (CN))
