Rare decays at CMS

Thursday 8 August 2019 10:40 (20 minutes)

Summary

We report new results on rare decays involving heavy flavors and tau leptons, using pp collision data collected by the CMS experiment at the LHC during the Run 2. The most recent measurements of on angular variables in $B \rightarrow K^{*} \mu \mu$ decays are also presented.

Presenter: WANG, Dayong (Peking University (CN))

Session Classification: Poster Session (Thu/Fri)

Track Classification: Quark/Lepton Flavour Physics
