

26th International Conference on Supersymmetry and Unification of Fundamental Interactions (SUSY2018)

Contribution ID: 73

Type: **Talk (closed)**

Dark matter from electroweak top-quark production

Tuesday 24 July 2018 15:10 (20 minutes)

Assume that dark matter couples mostly to the top-quark. This hypothesis is well motivated in models with scalar mediators, where flavor-hierarchical couplings to quarks prevent large flavor-changing neutral currents. In this talk, we discuss searches for dark matter produced in association with top-quarks at the LHC. We propose single-top-associated production as a new search channel for dark matter. Being complementary to existing searches with top pairs, the new single-top channel enhances the discovery potential for dark matter in future LHC analyses.

Parallel Session

Electroweak, Top and Higgs Physics

Authors: BISHARA, Fady (University of Oxford); HAISCH, Ulrich Andreas; WESTHOFF, Susanne (Heidelberg University)

Presenter: WESTHOFF, Susanne (Heidelberg University)

Session Classification: Electroweak, Top and Higgs Physics
