

CRIC A&A current status (1/3)

Jira ticket about CMS requests:

<https://its.cern.ch/jira/browse/CRIC-10?qjql=project%20%3D%20CRIC>

- Implemented: user-whitelist, user-black-list, auth-list
- Yet to be finalised/tested: prefetching from SiteDB/OIM/GOCDB, and granting same access rights to storage views based on 2 different authentication methods e.g. SSO&SSL.
- Yet to be implemented: machinery to handle privileged users.
- Pending issues:
 - OIM API needs authorization
 - SSO prefetch possible only for e-groups one belongs to

CRIC A&A current status (2/3)

Main CRIC repository :

- It contains only SSOAuth app.
- Soon also the SSLAuth (hopefully this week?).
- Local authentication: always there (just missing registration form) but for what use case? Stephan's example would work as well with SSL authentication only.

My CRIC repository:

- Major cleaning&restructuring of the SSO/SSL/VOMSauth code before merging (still in progress).

CRIC A&A current status (3/3)

Installation/setup of a CRIC env (from main repository)

- Done on VM in project "IT WLCG Operations": <https://aresh-cric01.cern.ch/>
- Twiki instructions would require some tidy up (hopefully this afternoon).
