

2018 Symposium of the Center for Network and Storage Enabled
Collaborative Computational Science

Contribution ID: 16

Type: **Presentation**

The OSiRIS Project

Monday, October 15, 2018 11:30 AM (30 minutes)

The NSF-funded OSiRIS project (<http://www.osris.org>), which is creating a multi-institutional storage infrastructure based upon Ceph and SDN is entering its fourth year. We will describe the project, its science domain users and use cases, and the technical and non-technical challenges the project has faced. We will conclude by outlining the plans for the remaining two years of the project and its longer term prospects.

Presenter: MC KEE, Shawn (University of Michigan (US))

Session Classification: Related Projects
