QED evolution of TMDs

Tuesday, 20 November 2018 09:35 (25 minutes)

In this talk I will first review the current status of higher-order perturbative calculations in pure QCD of the evolution/resummation of transverse-momentum-dependent functions (TMDs). Then, after introducing the proper definition of TMDs in QCD \times QED, I will present new results for the QED corrections to their evolution.
