

WLCG requirements for APEL

WLCG Accounting TaskForce Meeting
Jan 25th 2018

Julia Andreeva
CERN

Requirement for data validation

- Report raw wallclock and scaled wallclock in two separate attributes

Enabling accounting of the opportunistic resources

- For opportunistic resources topology description not necessary exists in GocDB.
- Therefore we need a possibility to consume data from alternative data sources for topology , CRIC for example

Running without BDII

- HS06 conversion factor is currently retrieved from BDII
- Make possible to use various information sources for conversion factor (site configuration file, some central source like GocDB or CRIC, etc...). Should be configurable in Apel client
