ROOT 6 on Windows (finally)

Wednesday, 12 September 2018 10:00 (15 minutes)

After (too) many years without any ROOT 6 release on Windows, we got our first *preview* release of ROOT 6 on Windows (6.14/00) and Visual Studio 2017. This presentation will expose some of the issues we had, what is the current status, what is missing, what has to be done to port ROOT on Windows 64 bit (horizon 2020?), and more generally what people should think of in order to write portable code.
