World Wide Web Initiative

The World Wide Web Initiative is the outcome of a series of meetings, seminars, and workshops. It is a project of the CERN, and will be supported by a number of other organizations and individuals. The initiative is a joint effort of scientists and technologists to create a global network of information resources.

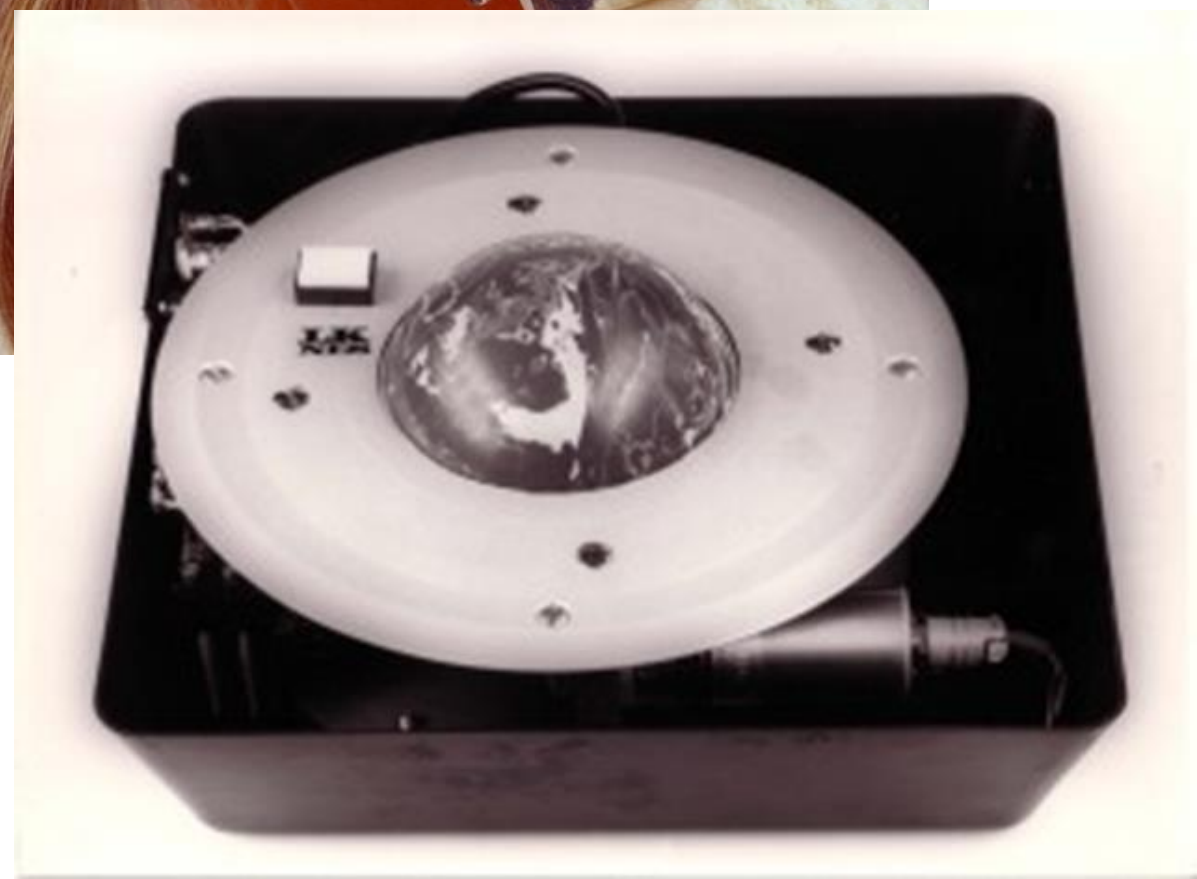

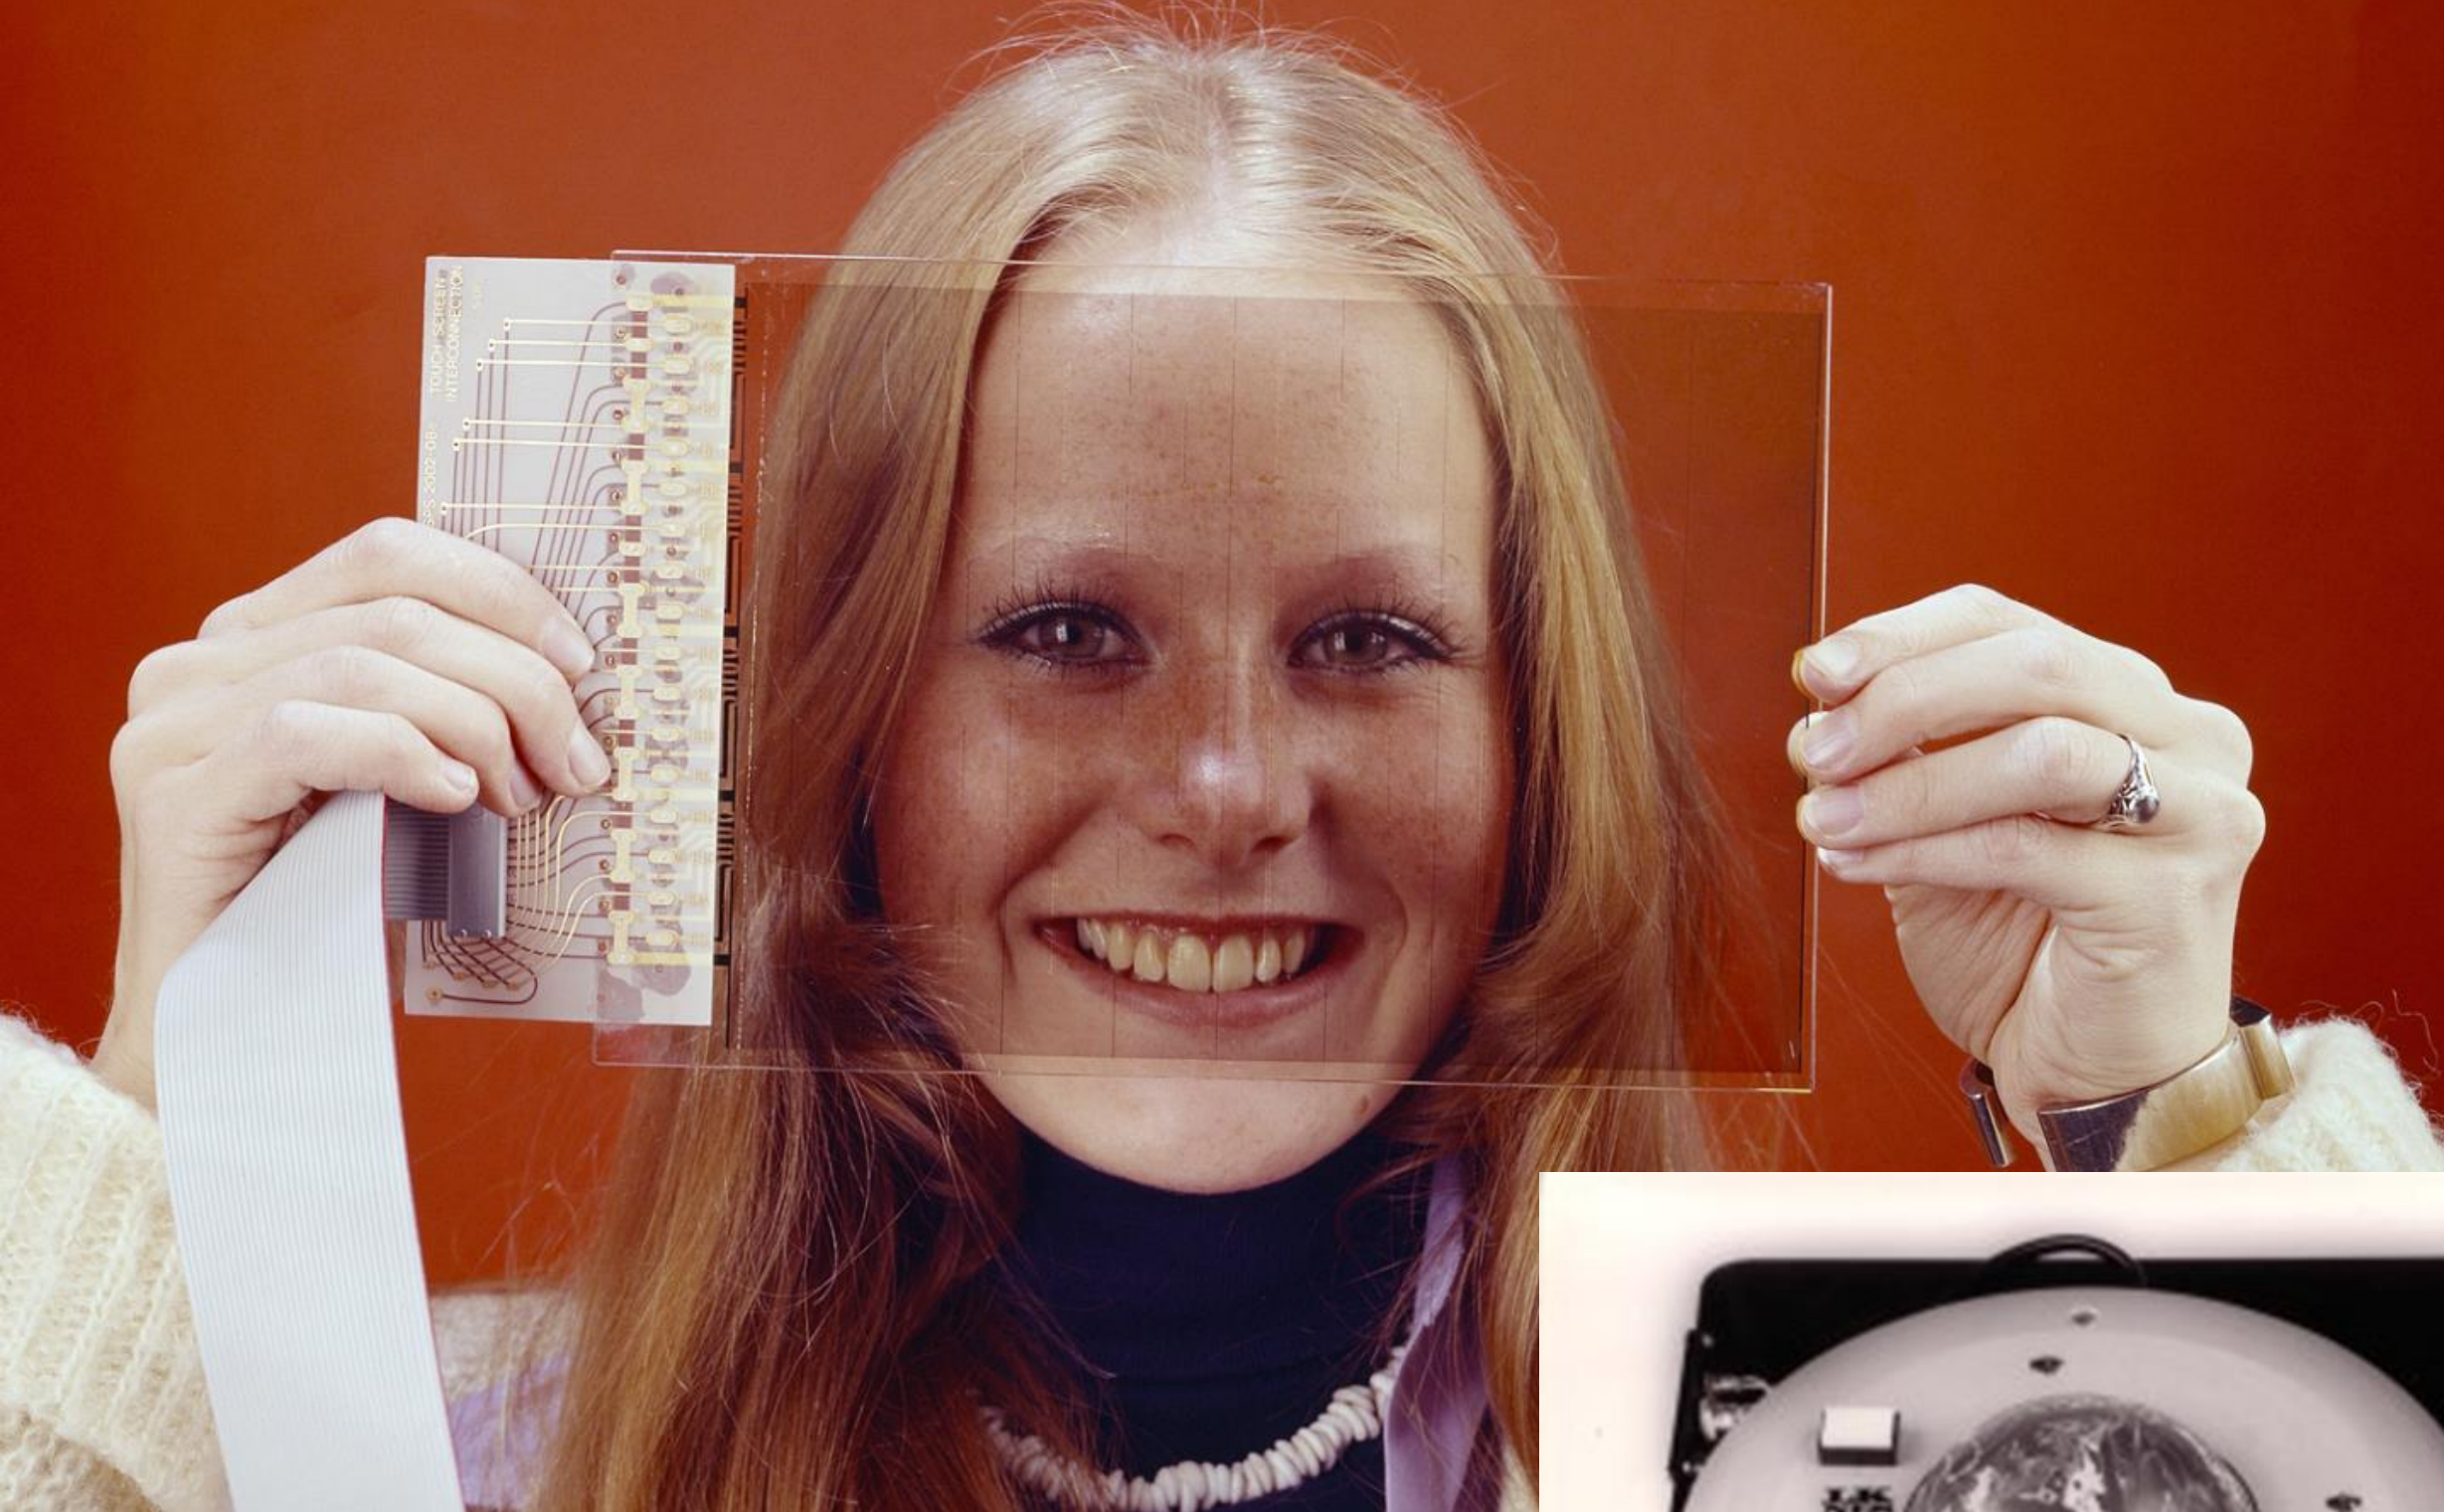

Objectives: To provide a framework for the development of a global network of information resources, to promote the use of the World Wide Web, and to support the development of new applications and services.

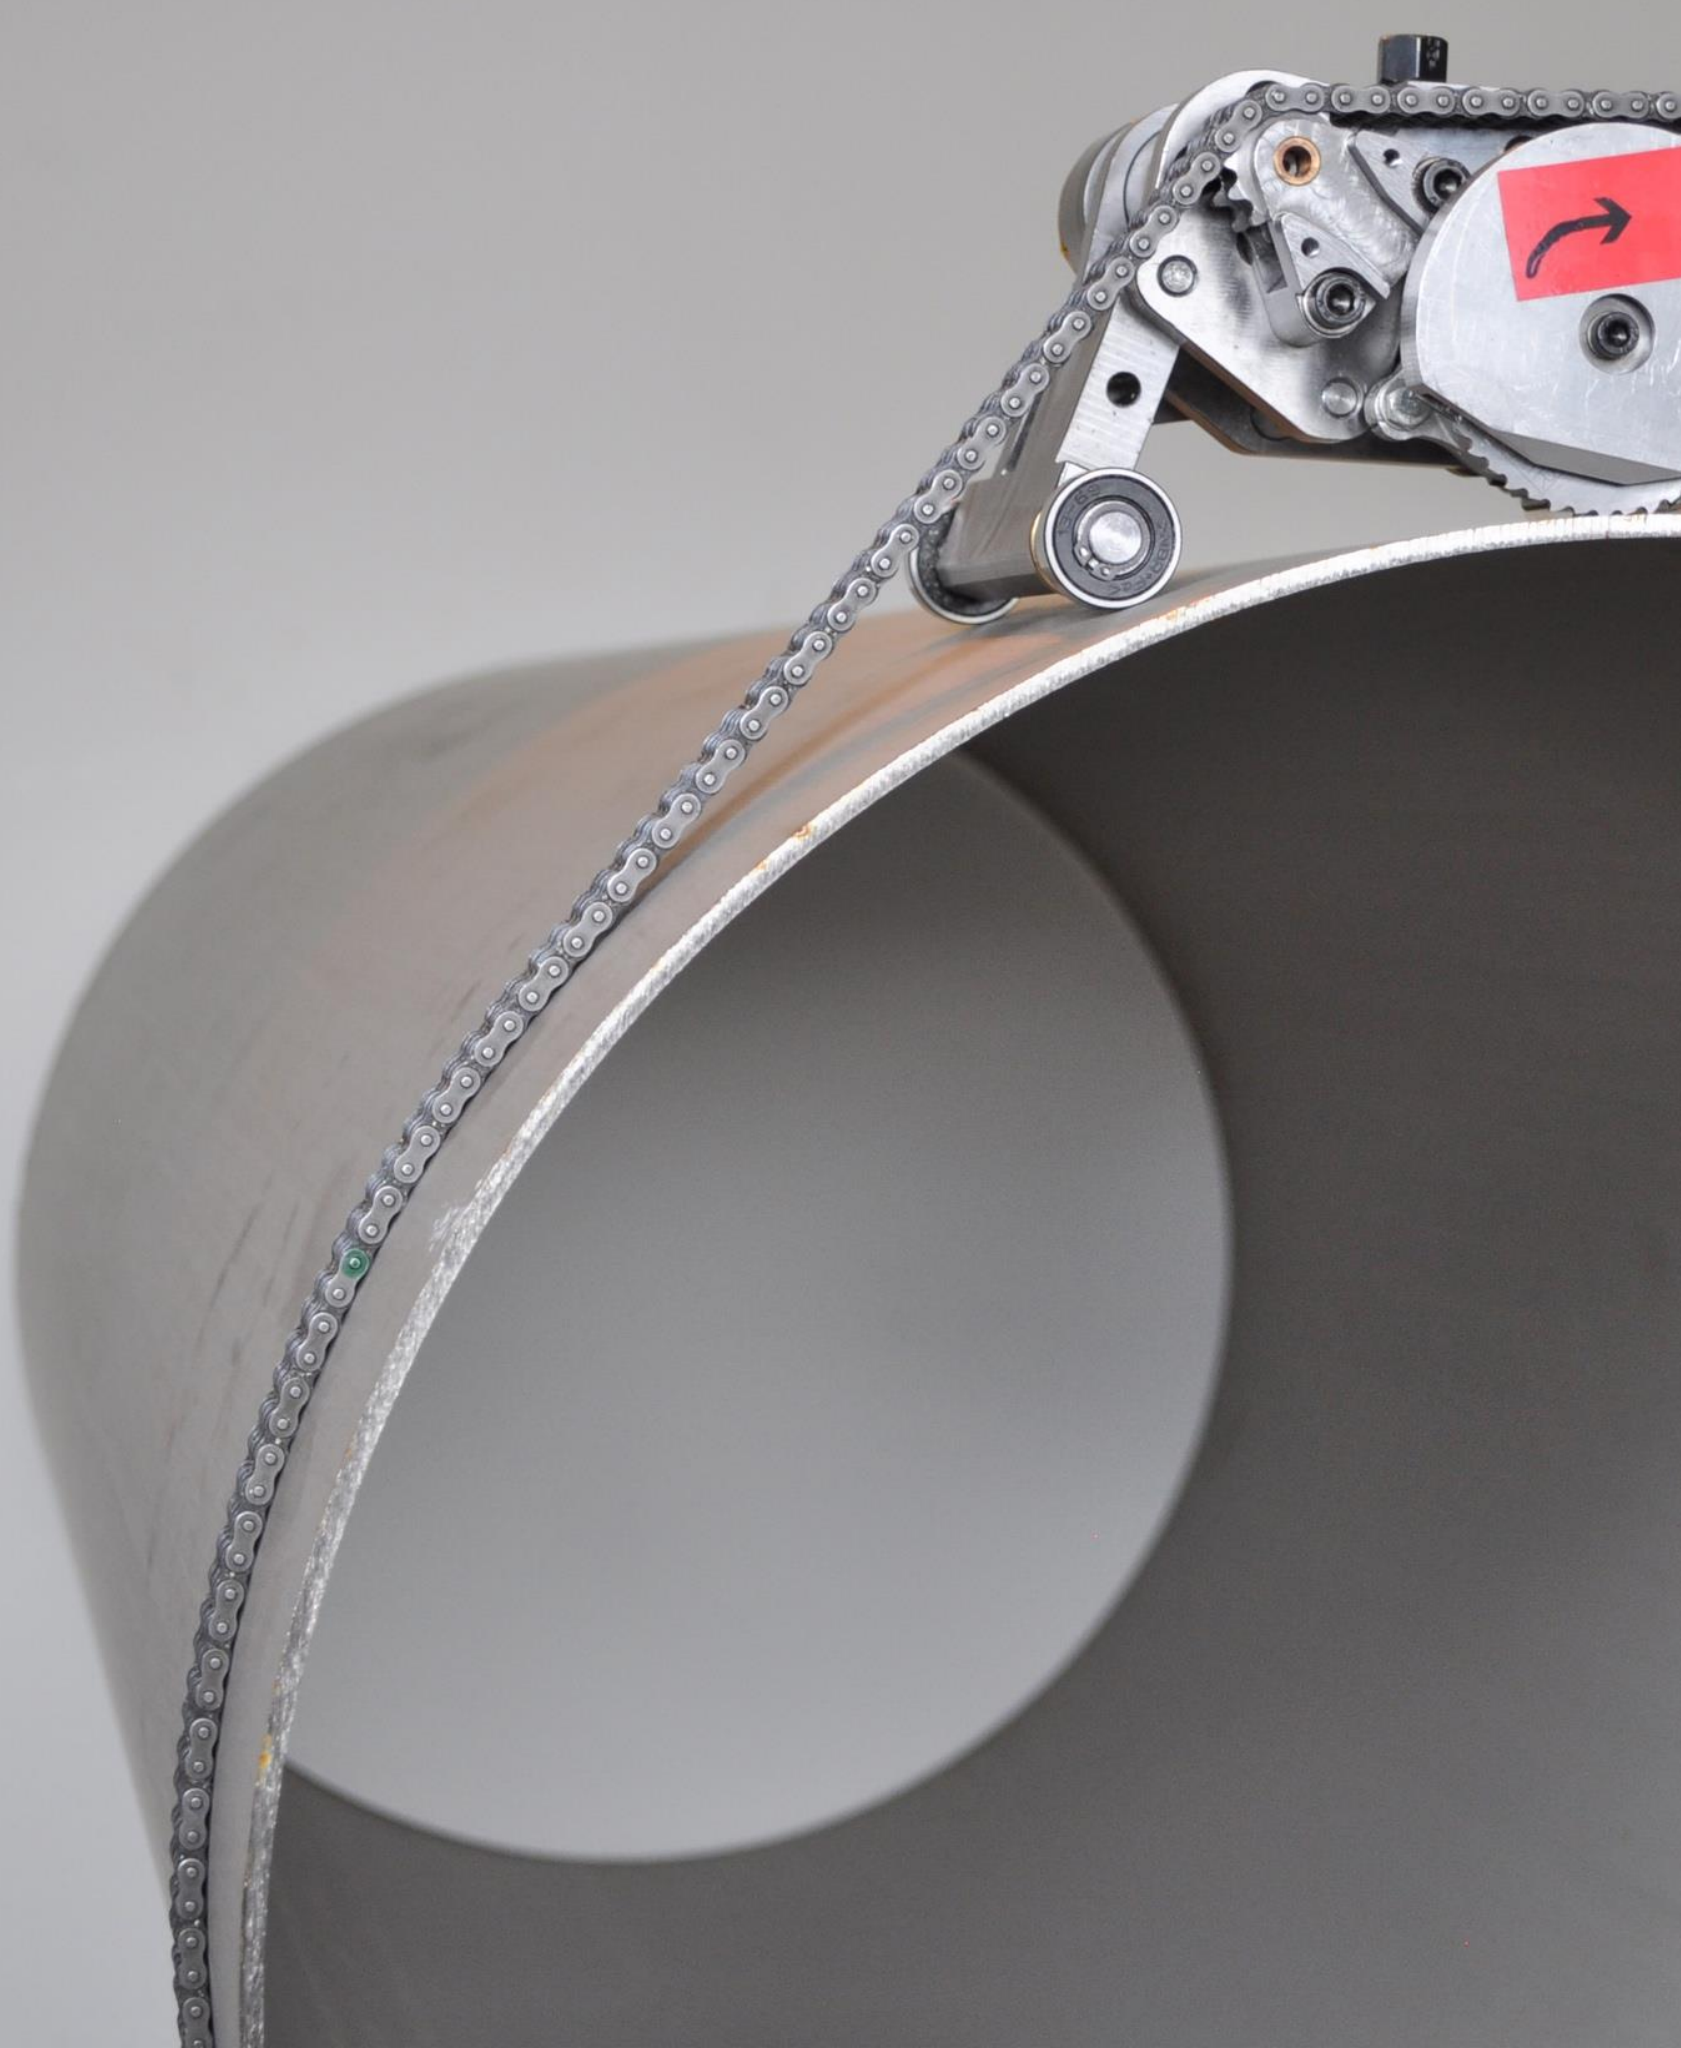

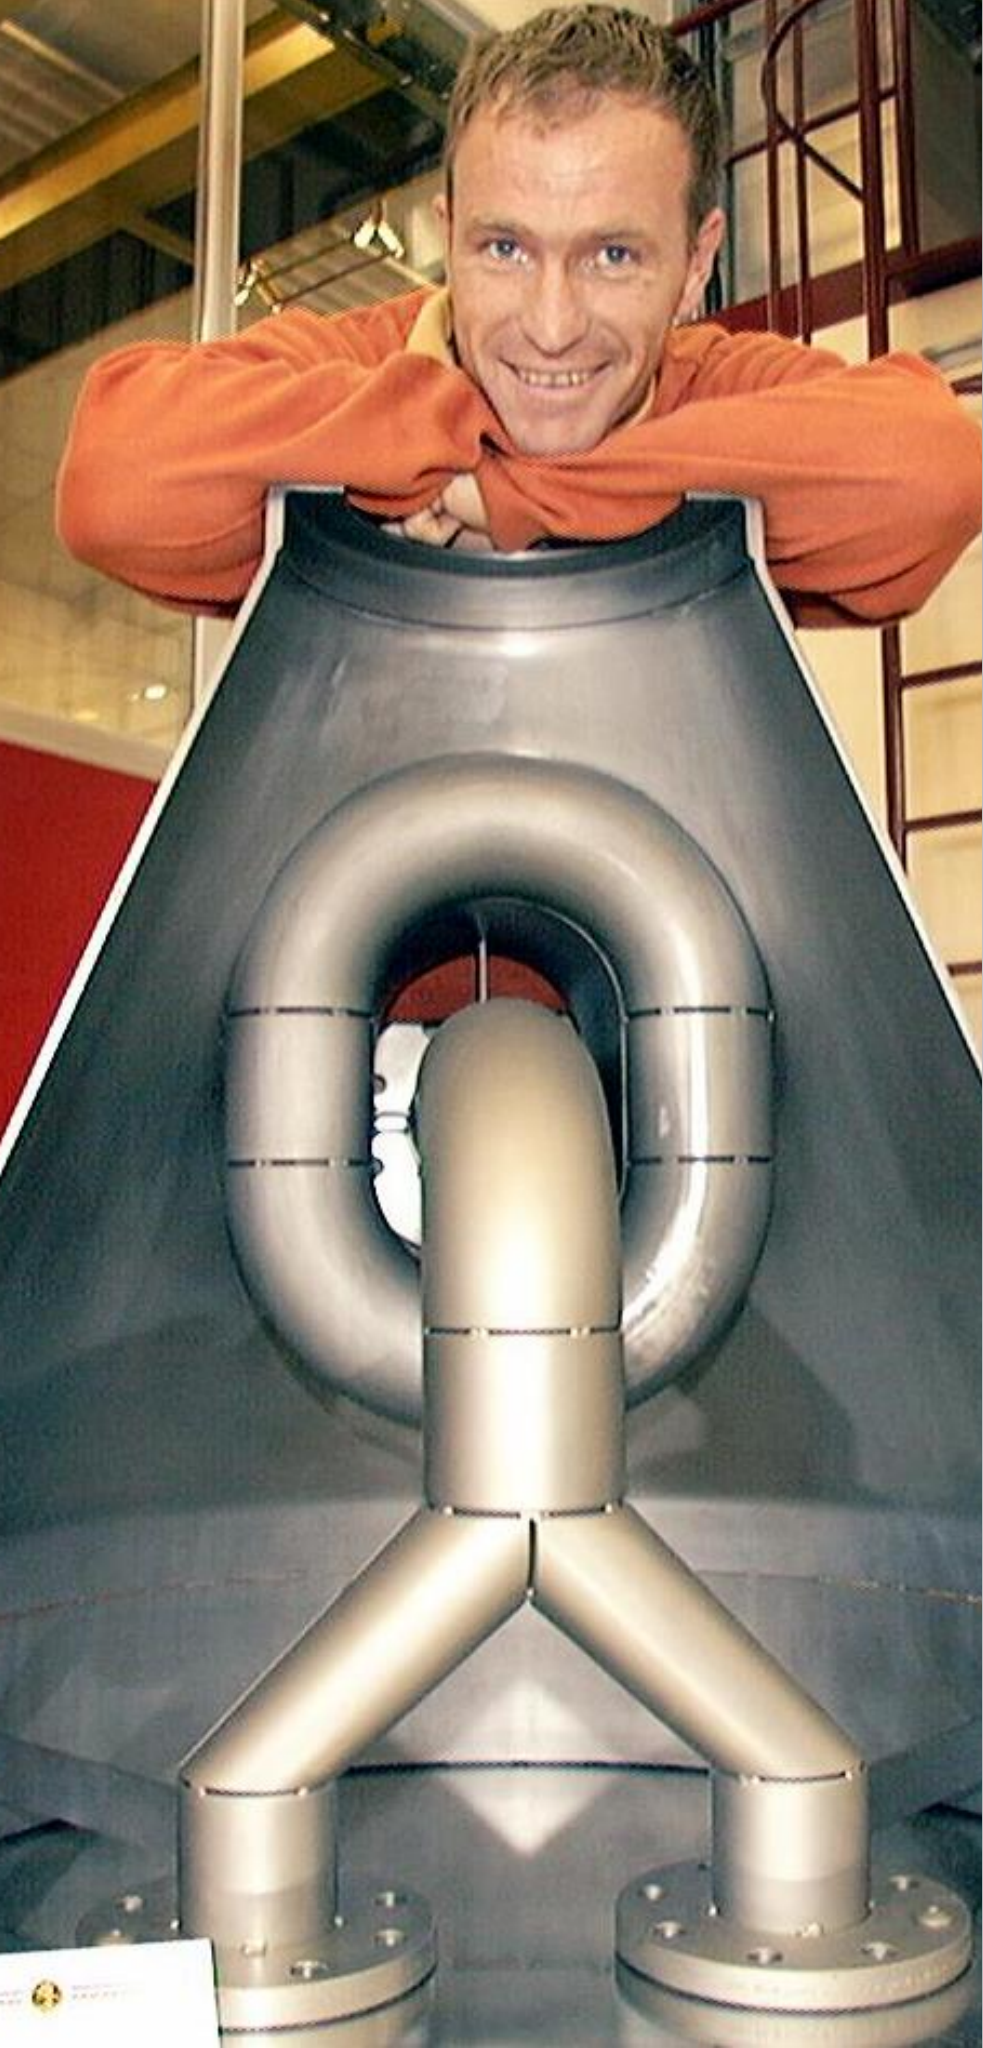

Activities: To develop a framework for the development of a global network of information resources, to promote the use of the World Wide Web, and to support the development of new applications and services.
