

Monte Carlo Production

Active MC Requests

https://prodtask-dev.cern.ch/prodtask/request_table/#/?phys_group=NOVALI&type=MC&status=active

Doug Gingrich (Univ. of Alberta)
David South (DESY)

ADC Weekly, January 30th 2018

MC Production Status

- > Solid 100-150k slots for MC16d reco for the last two weeks, in which time we've processed around 1.5 B more events: good progress
 - *PA and CP samples: 2.505 / 3.536 B events done. 10 more days at this rate; data waits until next Monday*
 - *Thanks to Misha and Dima, all of the MC16d bulk samples are now submitted (mixture of double tags, multiple numbers of events/file, other DEFT issues...)*
 - *However, I'm not sure we are decided on the double tag issue for all containers yet..?*
 - *I currently have 17 tasks identified as only having input HITS at INFN, and are paused for now*
 - *Bulk requests running with 351 to push through; user requests to follow*

- > MC16c NTUP_PILEUP production for bulk samples now "concluded" on tasks from both Doug (older ones) and David (newer ones). User requests in progress
 - *Doug's tasks are all done but I similarly have 19 paused tasks due to input merged AODs only being available at INFN. PMG asking for update when data at INFN (potentially) available again?*

- > Additional evgen submitted last week, remainder of MC16e W+jets, around 150M events, to eventually feed HPC simul
 - *More MC16e should probably come soon; evgen currently capped at 25k (MC16) + 5k (MC other)*

- > We still have quite a large backlog of new user requests, almost 50 waiting for approval (build up from before Xmas)
