TMD parton densities from Parton Branching method and applications

Tuesday, 5 June 2018 14:40 (20 minutes)

Transverse momentum dependent (TMD) parton densities at NLO from the Parton Branching method are obtained from fits to inclusive HERA DIS data. Collinear parton densities are also obtained using angular ordering constraints. The TMD densities are applied for predictions of processes at the LHC.

Presenter: JUNG, Hannes (Deutsches Elektronen-Synchrotron (DE))
