## **The Cosmic Axion Spin Precession Experiment**

Thursday 26 July 2018 17:20 (25 minutes)

The Cosmic Axion Spin Precession Experiment (CASPEr) is a direct Axion Like Particle (ALP) search. We use techniques analogous to Continuous Wave (CW) Nuclear Magnetic Resonance to set limits on the axion-nucleon coupling. The axion field can exert a torque on nuclear spins either by the axion wind effect or by inducing a time-varying Electric Dipole Moment (EDM) in the nucleon. We here report on the progress of the construction of the CASPEr-wind apparatus, and discuss anticipated sensitivity.

**Authors:** LAWSON, Matthew (Stockholm University); Prof. CONRAD, Jan (Stokcholm University); FERELLA, Alfredo Davide (Stockholm University); Prof. BUDKER, Dmitry (Johannes Gutenberg University); Prof. KIMBALL, Derek (CSU East Bay); Dr WICKENBROCK, Arne; Ms GIL SENDRA, Marina; Mr CENTERS, Gary; Mr FIGUEROA LEIGH, Nathan; Dr BLANCHARD, John; Mr GARCON, Antoine; ENGLER, Martin; Ms AYBAS, Deniz; Prof. GRAHAM, Peter; Dr RAJENDRAN, Surjeet; Prof. SUSHKOV, Alexander; Dr TRAHMS, Lutz; Dr WANG, Tao; Dr WU, Teng

Presenter: LAWSON, Matthew (Stockholm University)

Session Classification: 4.6 Theory

Track Classification: Direct Detection
