## The Spin-independent analysis of one tonne-year of XENON1T data

*Tuesday, July 24, 2018 3:40 PM (20 minutes)*

The XENON1T collaboration has completed a search for Weakly Interacting Massive Particles using a total of 1 tonne-year of exposure. This talk will detail the analysis performed of the combined XENON1T dataset searching for spin-independent scatters in a fiducial mass of 1.3 tonnes.
