

Physics Meets Blockchain

Markus Nordberg
Head of Resources Development
Development and Innovation (IPT-DI)

CERN, April 27, 2018

WHY ARE WE (NOT) HERE?

- OpenLab and IdeaSquare wanted to organize this very informal, exploratory workshop to gauge the interest within the CERN community – and outside – related to the use and applications of Blockchain and Quantum Computing
- This workshop should have taken place at IdeaSquare but, as victims of our own success, there was not enough space for us there today!

STRUCTURE OF THE WORKSHOP

- Food for Thought – input from our colleagues from Japan
- Some thoughts/questions folks at CERN are asking themselves about Blockchain and/or Quantum Computing (software)
- Open Discussion, exchange of ideas
- Conclusions and (possible) next steps

HOW TO GET INVOLVED?

- Based on the discussions and sharing of ideas today, we are willing, if requested, to follow these themes up in separate, more dedicated workshops
- Topics or initiatives related to Quantum Computing (software) will be followed by Federico Carminati (IT)
- Topics or initiatives related to Blockchain will be followed by Oday Darwich

All you need is

~~..Love~~ PHYSICS

..Design

..Business

..and Engineering.
