Conformal defects in 6d (1,0) theories from holography

Friday 25 May 2018 12:00 (40 minutes)

We present a BPS flow within minimal $N=1$ supergravity in seven dimensions describing a warped AdS_3 background supported by a “dyonic” profile of the three-form. Furthermore, we discuss the holographic interpretation of the above solution in terms of a defect SCFT₂ inside the 6d (1,0) theory dual to the AdS in the asymptotic region. Finally we provide the brane picture of the aforementioned defect CFT as D2- and wrapped D4-branes ending on a D6 – NS5 – D8 funnel in massive type IIA string theory.
