Vector Boson Fusion

- Energetic jets in the forward/backward directions.
- Higgs decays products in central rapidity region.
- Suppressed QCD radiation in central rapidity region.

Vector Boson Fusion

- Energetic jets in the forward/backward directions.
- Higgs decays products in central rapidity region.
- Suppressed QCD radiation in central rapidity region.

Vector Boson Fusion + Jet

H+3 Jets via VBF (only t-channels)

Total Cross Section

Scale Variations:

- LO: +26% to -19%
- NLO: less than 5%

JHEP 0802 (2008) 076 [arXiv:0710.5621]

H+3 Jets via VBF (only t-channels)

LO

NLO virt.

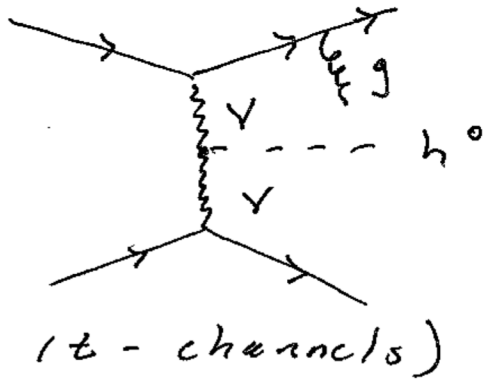

NLO Real

- No pentagon or hexagon diagrams included.
- Approximate as two deeply inelastic scattering processes that exchange a gauge boson.

Simulation Tools and Matrix Elements

- Herwig 7 Event Generator (<https://herwig.hepforge.org>)
- HJETS++ (<https://hjets.hepforge.org>)
- VBFNLO (<https://www.itp.kit.edu/vbfnlo>)

Inclusive Jet Selection Cuts

- (Inclusive cuts) Collider Energy and Cuts used: At least three anti-kt jets with $R=0.4$

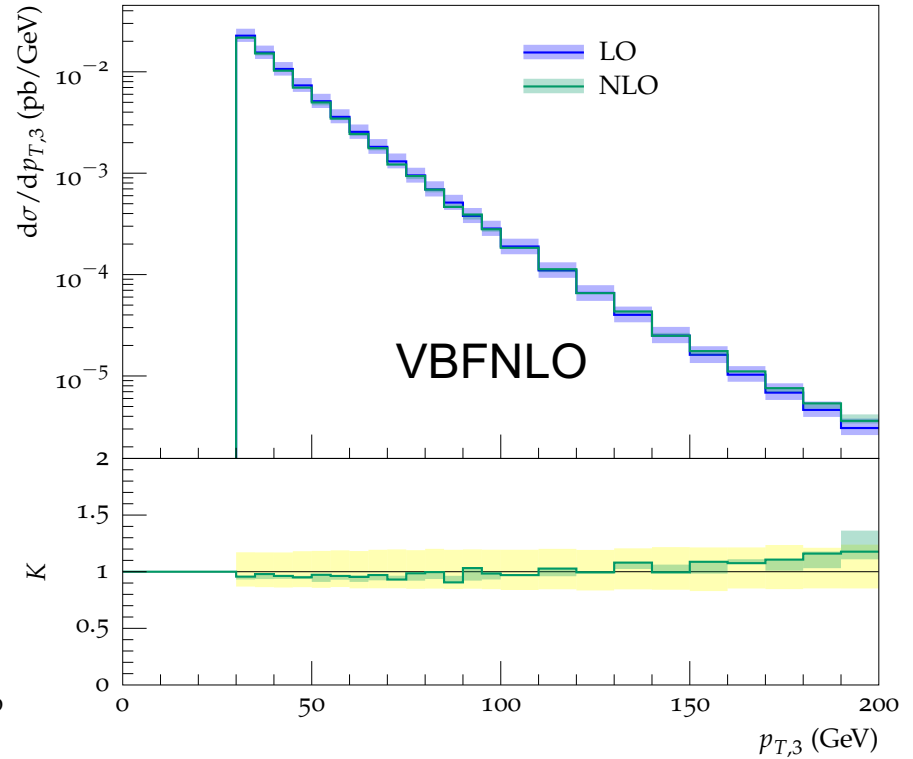

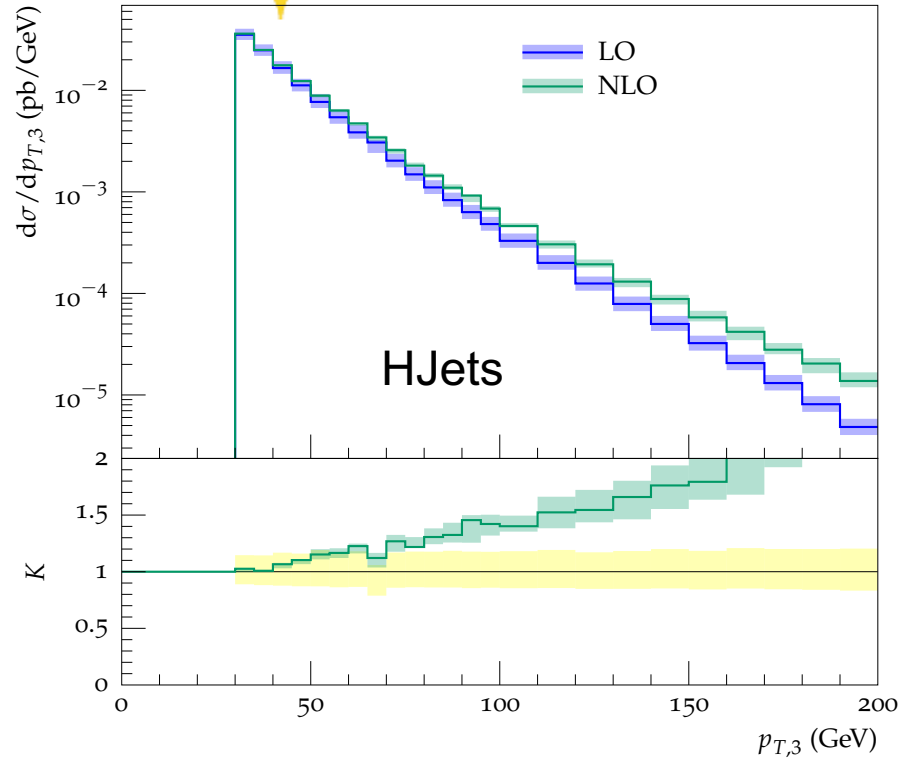

$$\sqrt{S} = 13 \text{ TeV}$$

$$p_{Tj} > 30 \text{ GeV} \quad |y_j| < 4.4$$

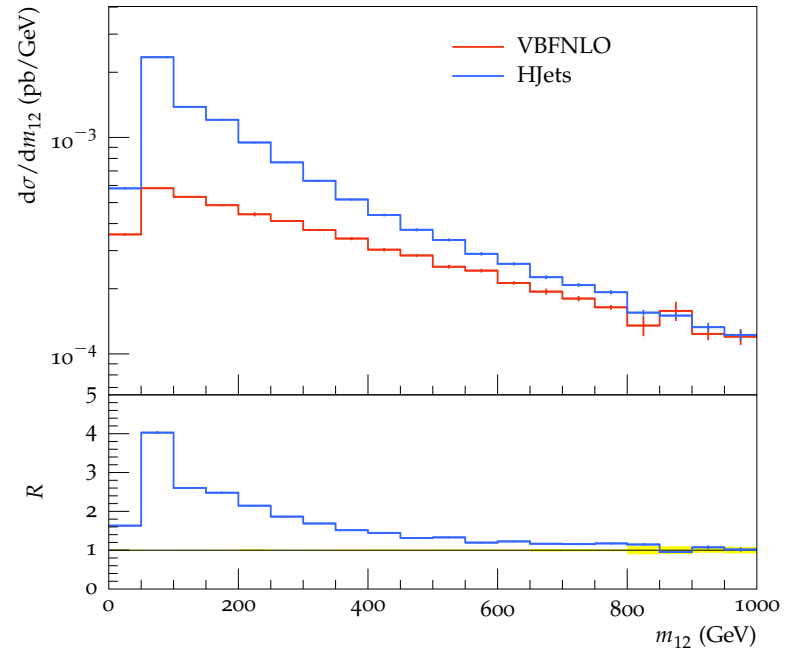

- PDF set: MMHT2014
- Scales: HT(jets)

H+ 3 Jets: Inclusive Cuts

NLO H+3 Jets: VBF Cuts

H+ 3 Jets: VBF cuts

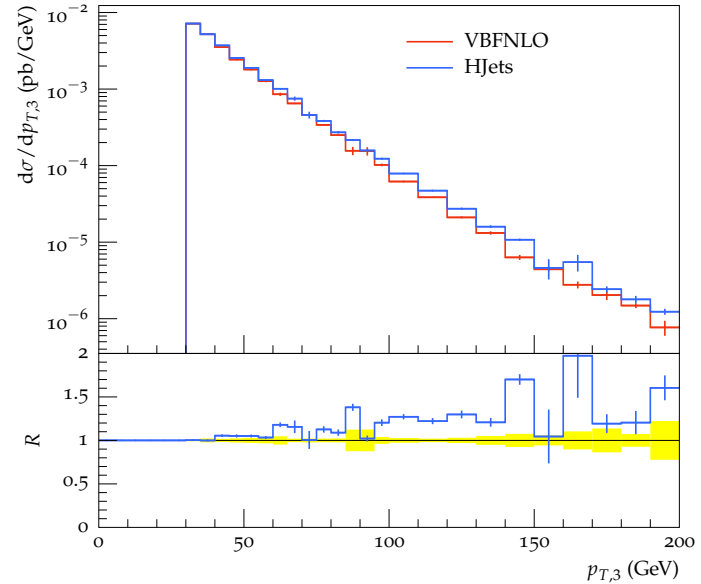

(VBF Cuts) $m_{12} > 600 \text{ GeV}$ $\Delta y_{12} = |y_1 - y_2| > 3$

NLO H+3 Jets

Inclusive Cuts

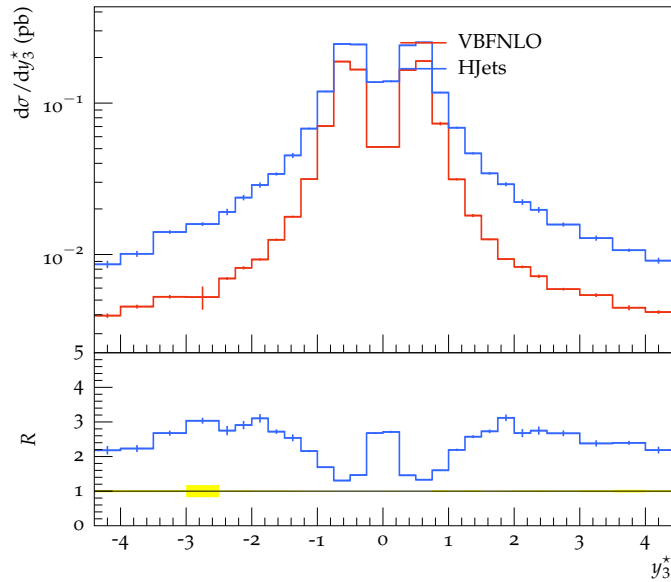

VBF Cuts

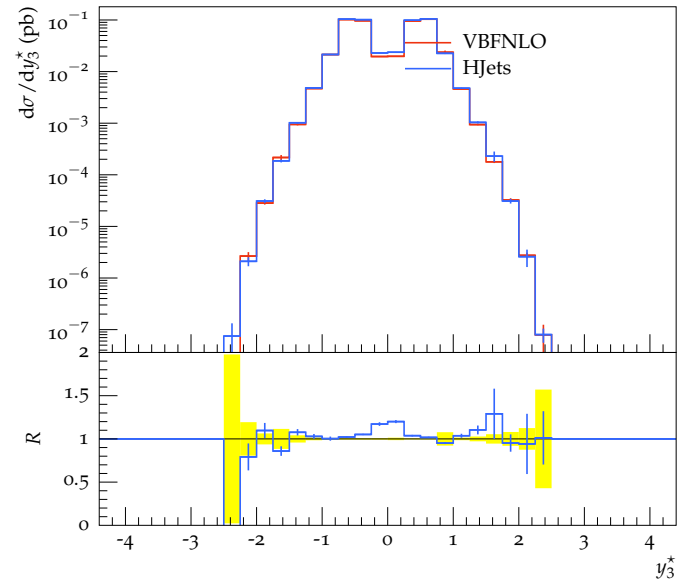

NLO H+3 Jets

Inclusive Cuts

VBF Cuts

VBF Cuts and Resonant Cuts

VBF Cuts:

$$m_{12} = \sqrt{(p_1 + p_2)^2},$$

$$m_{12} > m_{12}^{\text{cut}} \in \{0, 100, 200, 300, 400, 500, 600\} \text{ GeV}$$

$$\Delta y_{12} > \Delta^{\text{cut}} y_{12} \in \{0, 1, 2, 3\} \quad \Delta y_{12} = |y_1 - y_2|$$

Res. Veto:

$$m_V - \delta m_V < m_{jets} < m_V + \delta m_V$$

Transverse Momentum of the Third Jet

No Res. Veto

Di-jet invariant mass and rapidity gap

Res. Veto

The Chi-Squared Test

$$\chi^2 = \frac{1}{N_{\text{bins}}} \sum_{\text{bins } i} \frac{(\sigma_{i,\text{HJets}} - \sigma_{i,\text{VBF}})^2}{\max(\delta_\mu \sigma_i^2, \delta_{\text{stat}} \sigma_i^2)},$$

$p_{T,3}, y_3^*, y_h^*, \Delta y_{h,12}, \Delta \phi_{h,12},$ and m_{123}

Res. Veto

No Res. Veto

Conclusions

- For the first time H+3 jets at NLO in the VBF approximation has been stress-tested for a variety of VBF cuts.
- We have implemented a resonance veto on HVj events in order to perform a fair comparison between VBFNLO and HJETS.
- We find that the rapidity gap cut alone gives a good approximation where a ditag mass cut alone does not.

Thanks to Juan for the notification and to Michael Rauch for helping me isolate the bug!
