## MERRIMACK COLLEGE

The STEM paradox: Factors affecting diyers wn SilM it d: ACAT 2019

Isabelle D. Cherney, Ph.D. Dean \& Professor

## Diversity in STEM fields

- Introduction
- Gaps
- Gender, Physics, Computer Science, Engineering
- The STEM Paradox or Gender Equality Paradox
- Other Potential Barriers
- Possible Solutions
- Q\&A

## Diversity in STEM fields

- Underrepresentation of women in math-intensive fields
- Women obtain more than half of U.S. undergraduate degrees in biology, chemistry, and mathematics, yet they earn less than $20 \%$ of computer science, engineering, and physics undergraduate degrees (NSF, 2014)
- math-capable women disproportionately choose nonmath fields during adolescence (Ceci et al., 2009)
- women's and men's preferences are constrained and expanded by cultural factors (Cheryan et al., 2017)

## Diversity in STEM fields

## Diversity in STEM fields

## Percentage of Physics Faculty Members who are Women

|  |  | 2002 | 2006 | 2010 | 2014 |
| :--- | ---: | :---: | :---: | :---: | :---: |
| Rank |  |  |  |  |  |
|  | Full Professor | 5 | 6 | 8 | 10 |
|  | Associate Professor | 11 | 14 | 15 | 18 |
|  | Assistant Prof | 16 | 17 | 22 | 23 |
|  | Instructor/Adjunct | 16 | 19 | 21 | 23 |
| Other Ranks | 15 | 12 | 18 | 20 |  |
| Highest Degree Offered |  |  |  |  |  |
|  | Ph.D. | 7 | 10 | 12 | 14 |
|  | Master's | 13 | 15 | 15 | 18 |
|  | Bachelor's | 14 | 15 | 17 | 20 |
| Overall |  | 10 | 12 | 14 | 16 |

## Diversity in STEM fields

## Race and Ethnicity of Physics U.S. PhDs, Classes 2014-16 (3-year average)

Number Percent of all PhDs. White 84346
Asian American 57
Hispanic American 38
African American 161
Other US citizens 121
Non US citizens 861
Total $1827 \quad 100$

## Diversity in STEM fields

## S\&E as a \% of Non-S\&E

 Degrees in 2010| Countries | Men | Women |
| :--- | :---: | :---: |
| South Korea | $84 \%$ | $36 \%$ |
| Iran | $62 \%$ | $40 \%$ |
| Austria | $136 \%$ | $80 \%$ |
| Belgium | $170 \%$ | $98 \%$ |
| Bulgaria | $103 \%$ | $94 \%$ |
| Finland | $185 \%$ | $73 \%$ |
| France | $279 \%$ | $166 \%$ |
| Germany | $115 \%$ | $58 \%$ |
| Italy | $180 \%$ | $112 \%$ |
| Switzerland | $108 \%$ | $62 \%$ |
| United Kingdom | $181 \%$ | $110 \%$ |
| United States | $197 \%$ | $89 \%$ |

## Diversity in STEM fields

- Why is it important to focus on diversity and inclusion?
- Talent
- New majority
- Economics
- Globalization
- Innovation \& Creativity
- Thinking differently
- Diversity powers innovation

## The STEM Paradox

In Iran, 70\% of university graduates in STEM are women In UAE, Oman, Saudi Arabia, 60\% are women
In Sweden, $34 \%$ and in USA 19\% of engineers are female

The STEM Paradox: Why are Muslim-Majority countries producing so many female engineers?

- Professions are chosen for women
- Performance drives the fields, rather than interest
- Equalizing workforce participation between genders would produce 47\% economic growth in the Middle East (McKinsey, Women in the Workplace)

## Gender Equality Paradox

- Gender Equality Paradox: Countries with greater gender equality have a lower percentage of female STEM graduates (Stoet \& Geary, 2018)
- The more gender equality, the fewer women in STEM
- $18 \%$ U.S. computer-science college degrees go to women ( $27 \%$ take AP exam)
- welfare support, making choice of highly paid STEM jobs less attractive
- high level of social security make personal preferences more apparent

## Diversity in STEM fields

## Gender Equality Paradox

- 475,000 adolescents across 67 countries (Stoet \& Geary, 2018)
- The Global Gender Gap report (World Economic Forum)
- Overall Life Satisfaction (UN Development Program)
- PISA (math, science literacy and reading comprehension)
- Achievement in STEM subjects similar for both genders
- Intraindividual strength: Boys are often better in science relative to their overall academic average
- Boys' intraindividual strength in science is larger than girls'
- Girls have higher ability in non-STEM subjects (e.g., reading)
- Girls had lower interest in science subjects
- In UK, 29\% of STEM graduates are female, whereas $48 \%$ might be expected to take science subjects based on science ability

## Other Possible Factors

- Unconscious biases push girls away from STEM
- Parents think science is harder and less interesting for their daughters which predict career choices
- Women get less credit than men for the same math performance
- Women are less likely to get hired or chair dissertations
- Less pay
- Women of color face even greater challenges as racial and gender biases intersect

## Other Factors

- Women hold primary responsibility for taking care of the home and children
- Visuospatial \& verbal abilities
- Gender differences in distributions \& variances
- Gender differences in career development choices
- Family, neighborhood, peer, \& school influences
- Stereotype threat: well-known stereotype is made salient
- Training studies
- Achievement related choices

## Achievement Related Choices

Eccles (1994)

## Diversity in STEM fields

- Stereotype Threat, Role Models \& Career Choices (Cherney \& Campbell, 2011)
- 548 U.S. boys \& girls from single-sex and coeducational high-schools
- Stereotype Threat (ST): well-known stereotype is made salient
- Increased self-esteem and achievement motive in SS schools
- Career choices, Role models, and Stereotype Reactance

## Career Choices

| Career Choices | Coeducational Schools |  | Single-Sex Schools |  | Overall |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Boys | Girls | Boys | Girls |  |
| Health Sciences | $20.8 \%$ | $35.8 \%$ | $20.8 \%$ | $32.3 \%$ | $28.8 \%$ |
| Social Sciences | $1.9 \%$ | $15.3 \%$ | $5.9 \%$ | $11.8 \%$ | $9.6 \%$ |
| Physical Sciences | $21.7 \%$ | $9.5 \%$ | $20.8 \%$ | $9.6 \%$ | $14.0 \%$ |
| No Sciences | $55.7 \%$ | $39.4 \%$ | $52.5 \%$ | $46.5 \%$ | $47.6 \%$ |

## Gender Balancing

- Why are some STEM fields more gender balanced than others? (Cheryan, Ziegler, Montoya, \& Jiang, 2017)
- Disaggregated STEM fields
- Computer Science, Engineering, Physics
- Biology, Chemistry, Mathematics

## Diversity in STEM fields

## Gender Balancing

- Factors that influence physics, engineering, computer science
- Stereotypes of each field (negative about women's abilities)
- Income potential
- Perceptions of work/family conflict
- Perceptions of the value of STEM
- Lack of (female, relatable) role models
- Insufficient early experiences
- Freedom to choose course offerings
- Gender Gap in Early Educational Experiences
- Gender Gap in Self-Efficacy

## Possible Solutions

- Possible Solutions
- Target girls for whom science and math are the best subjects and who enjoy it but still don't choose it (Stoet, \& Geary, Psych Science, 2018)
- Girls are more engaged when they're 'Doing Science' rather than 'Being Scientists'
- Avoid using gender labels at very young age
- Explain how doing science may save lives and help people
- Make coding fun!
- Promote self-efficacy, particularly in girls

## Possible Solutions

- For Managers
- Determine and understand need for diversity and inclusion in organization; dedicate resources
- Establish diversity plans/goals and integrate into performance review and recruitment plan
- Retention plan
- Support a climate that values diversity, equity and inclusion and supports all members to thrive
- Establish a culture of accountability and assessment
- Pay equity

## Conclusions

- Questions
- Can we realistically expect more diversity in the physical sciences?
- What barriers do you encounter?
- What ideas and solutions would you implement?
- How do we avoid unconscious bias and stereotyping?

諫葍 MERRIMACK COLLEGE

## Physics Identity Framework

## Physics Identity Framework

- Influence of students' physics \& math identities on choices to pursue physics careers
(Lock, Hazari, \& Potvin, 2013)
- 6772 surveys SaGE data (Sustainability and Gender in Engineering)
- Males reported higher physics recognition and interest than females
- Strategies aimed at improving female representation in physics should emphasize physics recognition and interest rather than performance/competence

## Diversity in STEM fields

|  | Earned S\&E doctoral degrees by sex and region 2010 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
