

Use Cases v0.99...

- Discussion of [use cases](#) has been going on for quite some time (sporadically, at least)
- In the end the final discussions were not on use cases *per se*, but on topics related to ease of use by different actors
 - Important for assessment, but not part of the use case
 - So I moved these to an [archive document](#)
- I took the opportunity to rephrase a few of the points to be more use case and less requirement (some blurring between stories, use cases and requirements - in the end be pragmatic over dogmatic)
 - The use cases are the major bullets, additional interpretation (towards requirements) are the minor bullets
 - I think this produces the most useful document
- So the question is: is there anything to prevent 0.99 → 1.0 now?
