

- Do you think that distributed storage is a viable solution at your institute?
- What level of data security do you need?
 - How many copies of the files do you want?
- Do you think that it is a good idea to keep separate grid storage cache (SRM) from the analysis storage?
- Are there any features in XRootD you think are important and are missing?
- Do you want data subscription (and grid software at your site)?
- Other ideas for storage?
