

# Integration of PyROOT and Current Cppyy

Enric Tejedor

<https://root.cern>

- ▶ What I did
  - Took current Cppyy and integrated it into ROOT
  - Basically replaced PyROOT with Cppyy
- ▶ Why I did it
  - To understand better the structure of Cppyy and how it compares to PyROOT's
  - To check if we can incorporate into PyROOT the new features of Cppyy

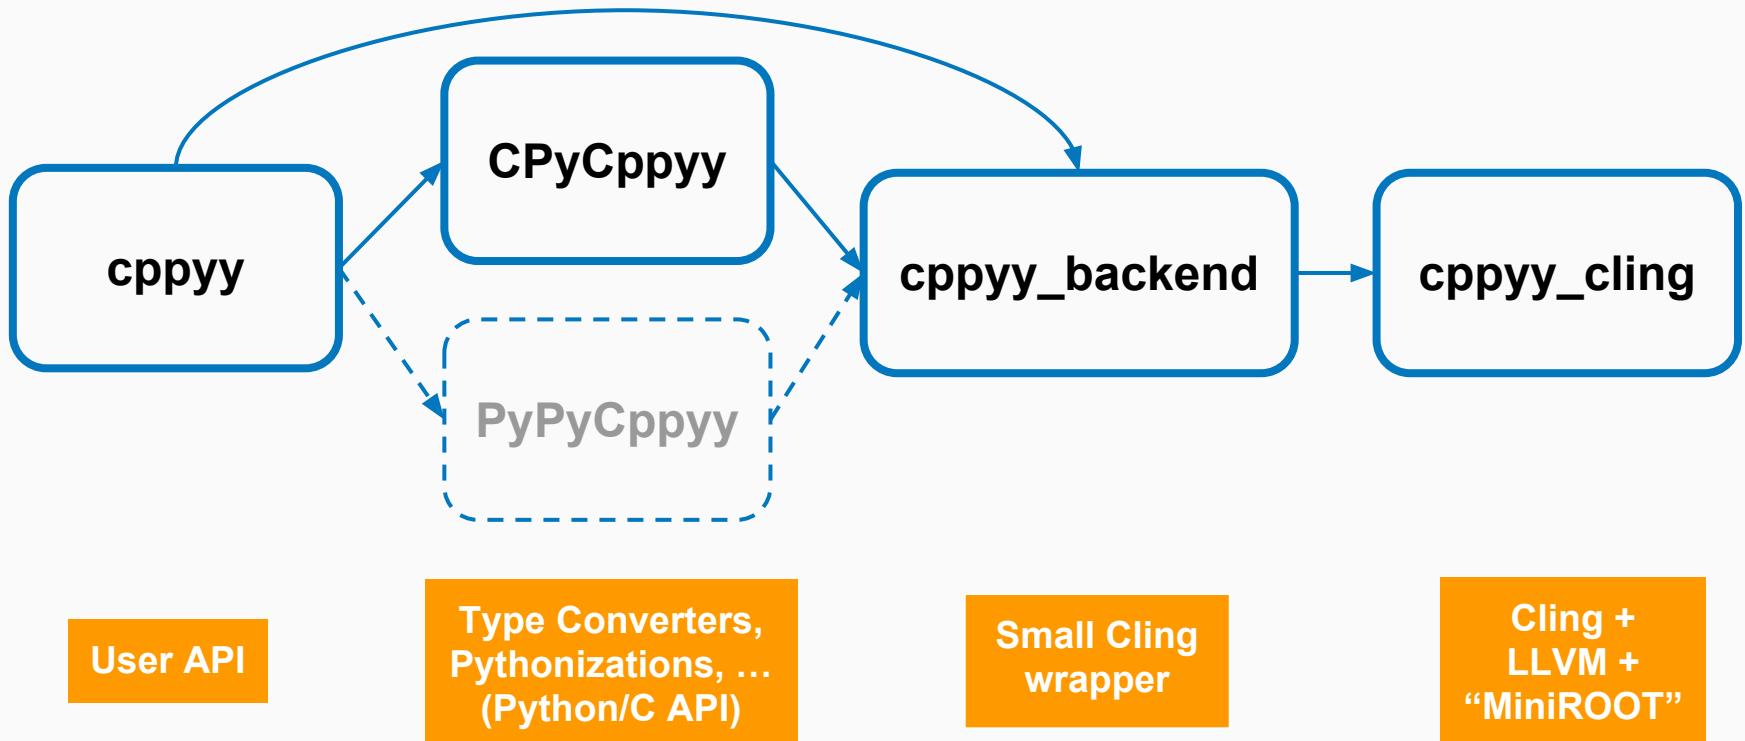

- ▶ Automatic Python-C++ bindings generator
- ▶ Author: Wim Lavrijsen (former PyROOT developer)
- ▶ Aim: standalone layer on top of Cling
  - Although not there yet, still ROOT-dependent

# Cppyy: Structure

- ▶ A Cppyy installation is divided in 4 packages:

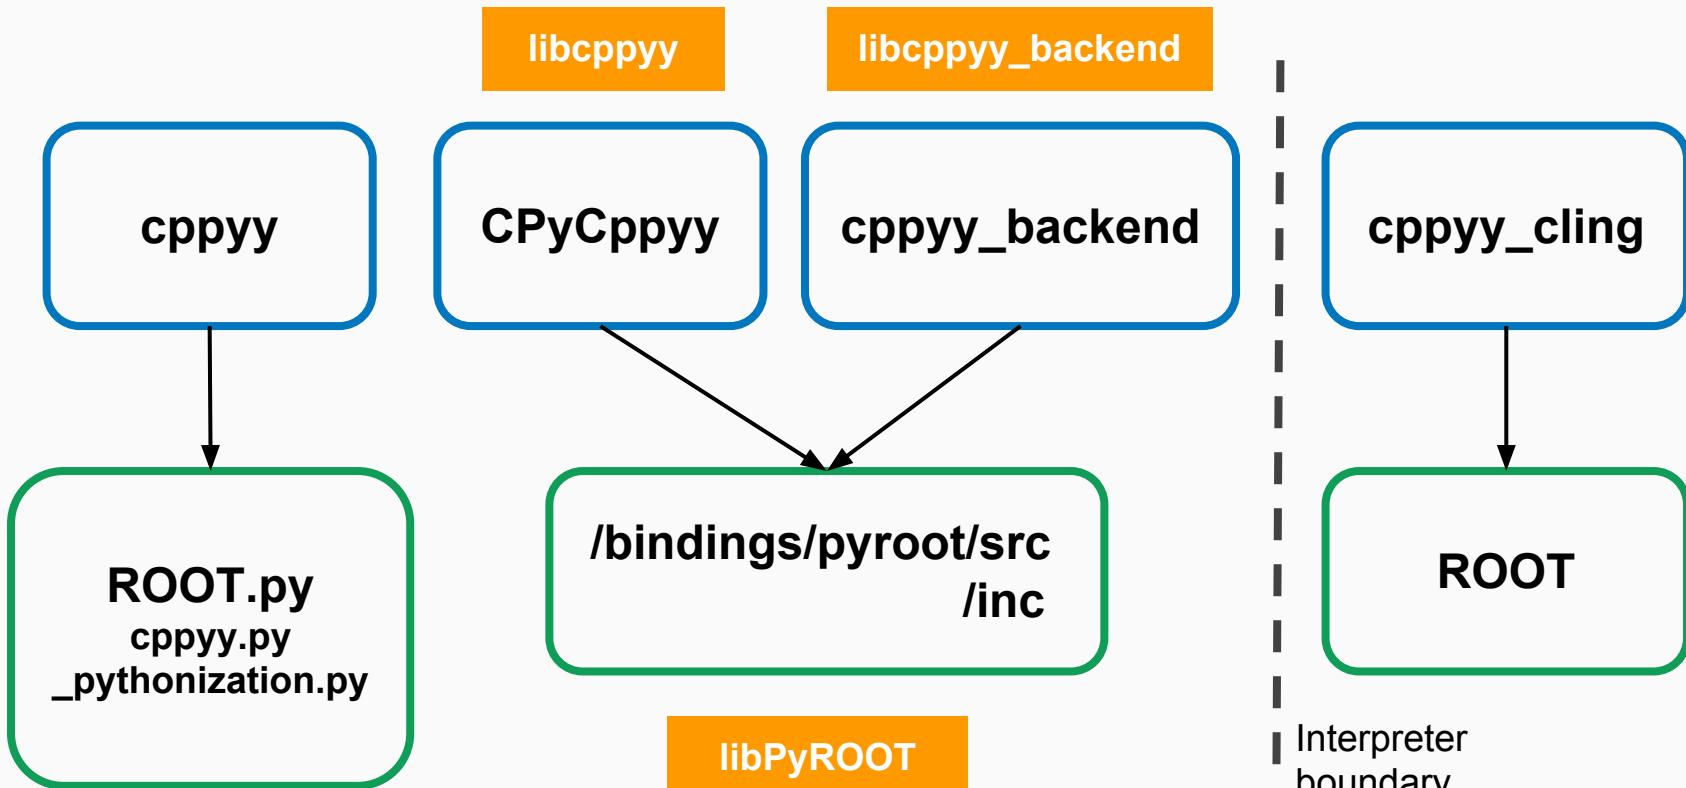

# Mapping Cppyy to PyROOT

Cppyy

PyROOT

# Results of the Integration

- ✖ ROOT-specific pythonizations are no longer there
  - TTree, TFile, TFX, interactive graphics, ...
- ✖ Test failures
  - Python tests: 95 %
  - Pyroot tutorials: 57 %
- ✓ New features
  - Lambda variables
  - Move semantics (r-value reference parameters)

# Lambdas

- ▶ This works now:

```
>>> import ROOT
>>> ROOT.gInterpreter.ProcessLine(
"auto mylambda = [](int i) { std::cout << i << std::endl; };")
140518947094560L
>>> ROOT.mylambda
<cppyy.gbl.function<void(int)>* object at 0x35f9570>
>>> ROOT.mylambda(2)
2
```

# Move Semantics

- ▶ This is also possible now (requires a [fix](#) in cling):

```
>>> import ROOT
>>> ROOT.gInterpreter.ProcessLine(
'void myfunction(std::vector<int>&& v) {
    for (auto i : v) std::cout << i << " ";
}')
0L
>>> v = ROOT.std.vector(int)(range(10))
>>> ROOT.myfunction(ROOT.std.move(v))
0 1 2 3 4 5 6 7 8 9
>>> ROOT.myfunction(ROOT.std.vector(int)(range(10)))
0 1 2 3 4 5 6 7 8 9
```

# Next Steps

- ▶ Investigate test failures
  - Check if there is any fundamental issue
- ▶ Understand how ROOT pythonizations could be brought back
  - And new ones added
- ▶ Check whether we lost anything else in the migration
- ▶ Try with Python 3
- ▶ If no blockers are found, decide on how we could integrate Cppyy and PyROOT package-wise

# The Code

<https://github.com/etejedor/root/tree/cppyy-integration>

# Backup Slides

# Name Changes (PyROOT-Cppyy)

PyROOT	Cppyy
MethodProxy	CPPOverload
ObjectProxy	CPPInstance
PropertyProxy	CPPDataMember
PyROOT	CPyCppyy
PyROOTType	CPPScope
RootModule	CPyCppyyModule
RootWrapper	ProxyWrappers
TCallContext	CallContext

# Name Changes (PyROOT-Cppyy) (II)

PyROOT	Cppyy
TClassMethodHolder	CPPClassMethod
TConstructorHolder	CPPConstructor
TCustomPyTypes	CustomPyTypes
TFunctionHolder	CPPFunction
TMemoryRegulator	MemoryRegulator
TMethodHolder	CPPMethod
TSetItemHolder	CPPSetItem
TTupleOfInstances	TupleOfInstances

# Other Changes (PyROOT-Cppyy)

- ▶ New
  - DeclareConverters, DeclareExecutors, LowLevelViews, PyObjectDir27, TypeManip
- ▶ Deleted
  - TPyBufferFactory, TPyDispatcher, TPyFitFunction, TPyROOTApplication, TPySelector
- ▶ Modified
  - Converters, Cppyy, Executors, PyCallable, PyStrings, Pythonize, TemplateProxy, TPyArg, TPYClassGenerator, TPyException, TPyReturn, TPython, Utility
