

Overview of (some) European e-Infrastructure Projects

Ian Collier

STFC Scientific Computing Department

UKT0 Collaboration Meeting

Abingdon 15th March 2018

15th March 2018

Science & Technology Facilities Council
Rutherford Appleton Laboratory

Some History

- WLCG and EGI are both descended from EU DataGrid (EDG) project 2001-4
- EDG had the LHC experiments, ESA, and a biomedical collaboration as user communities
- “LCG” then focussed on the LHC
 - As WLCG now, it operates worldwide
- EGI was started (via EGEE I, II, III) with a conscious focus on supporting all sciences
- EGI (now as part of EOSC hub) provides some key services to WLCG
- EU Commission has been developing and refining its vision – and shaping the projects it supports

Essential components

- WLCG in Europe uses the EGI services
 - GGUS (tickets)
 - GOCDDB (site registration)
 - APEL (accounting)
- The LHC experiments are the main users of EGI (92% of CPU work done)
- And sites focussed on the LHC are the main suppliers of EGI resources
- But WLCG tends to have its own support structures, technical working groups, etc

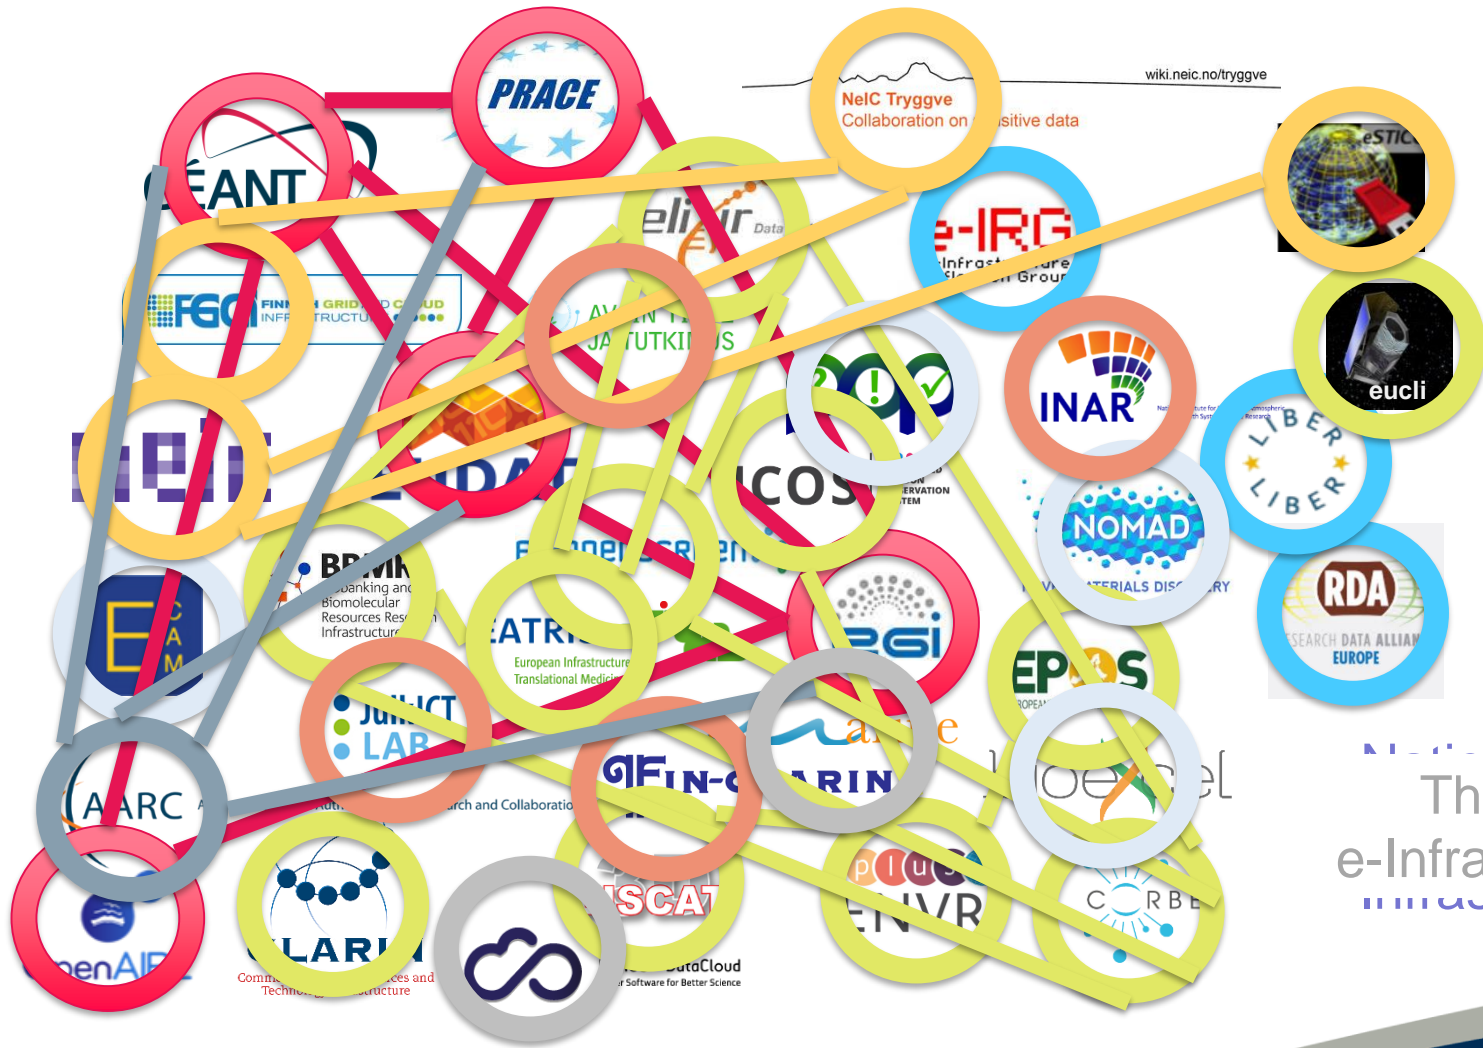

European Landscape

European Cloud Initiative, April 2016

- » Building a competitive data and knowledge economy in Europe
 - to develop a trusted, open environment for the scientific community for storing, sharing and re-using scientific data and results- the **European Open Science Cloud**
 - to deploy the underpinning super-computing capacity, the fast connectivity and the high-capacity cloud solutions they need via a **European Data Infrastructure**
 - Focussing initially on the scientific community, the user base will be expanded to the public sector and to industry, creating solutions and technologies that will benefit all areas of the economy and society

Joint e-Infrastructure EOOSC Vision

The Open Science Cloud offers researchers from **all** disciplines **seamless, open access** to the advanced digital capabilities, resources and expertise they need to **collaborate** and to carry out data- and computing-intensive science.

Secure and **trustworthy**, the Open Science Cloud **engages** researchers in **governing**, managing and preserving resources for **everyone's benefit**.
