Weinberg operator

The Weinberg operator:

$$\delta\mathcal{L} = \frac{1}{2\Lambda} (\bar{L}_\alpha^c \hat{H}^*) (\hat{H}^\dagger L_\beta)$$

Three ways to generate the $d = 5$ operator at tree level.
type I, type II and type III see-saw mechanism:

Warning!!!

$$m_\nu \propto \frac{v^2}{\Lambda}$$

$\Lambda \sim 10^{14}$ GeV \rightarrow too large to be tested.

Majorana neutrinos

For Majorana neutrinos, one can write

$$m_\nu \propto \epsilon \cdot \left(\frac{1}{16\pi^2} \right)^n \cdot \left(\frac{v}{\Lambda} \right)^{d-5} \cdot \frac{v^2}{\Lambda}$$

High-dimensional neutrino masses

Conclusion

Genuine models

Already studied in the literature:

- $d = 5$ neutrino masses at 1-loop, 2-loop and 3-loop
- $d = 7$ neutrino masses at tree level
- $d = 7$ neutrino masses at 1-loop

So, we considered all tree-level decompositions of the $d = 9$, $d = 11$ and $d = 13$ neutrino mass operators. There is a single $\Delta L = 2$ neutrino mass operator of dimension d , which is always of the following form:

$$\mathcal{O}^d \propto LLHH(H^\dagger H)^{(d-5)/2}.$$

Genuine models:

those models which provide the dominant contribution to the neutrino mass matrix, assuming no extra symmetries beyond the standard model ones.

Conclusion

We have found all genuine neutrino mass tree-level topologies, diagrams and models for these operators:

- $d = 9 \rightarrow 18$ topologies and 66 diagrams.
- $d = 11 \rightarrow 92$ topologies and 504 diagrams.
- $d = 13 \rightarrow 576$ topologies and 4199 diagrams.
- a total of 10 genuine models: 2 models at $d = 9$ and $d = 11$ each, and 6 models at $d = 13$.

$d=9$

Preliminaries

High-dimensional neutrino masses

Conclusion

Two more model variations for the first diagram (top row): Replace either one or both of the $4_{3/2}^F$ by a $4_{1/2}^F$ (rearranging H and H^\dagger correspondingly). The models with $4_{1/2}^F$ are only genuine with a 7_0^F .

Conclusion

We have discussed the systematic deconstruction of the $d = 9$, $d = 11$ and $d = 13$ neutrino mass operators at tree-level. We have found total of 10 genuine models: 2 models at $d = 9$ and $d = 11$ each, and 6 models at $d = 13$.
