

PACKAGING DISCUSSIONS IN NAPLES

Lively discussion, high interest.

Use Cases document v1.0: *Healthy discussion on the usecases. Starting point. The devil is of course in the details and we need to finish the test drive part.*

- **In-package incremental builds:** *how do we blur the boundaries between packaging and building, e.g. for in package incremental builds.*
- **Development environment:** *how do developers actually use the builds?*

Containers and deployment: *we seem to have only tangentially touched containers so far, but having a trusted build / run environment could simplify a lot what we do?*

- *Most likely true for the Grid deployments. How about laptops? How about access to hardware (e.g. for datataking)?*
- *Nix provides a self-contained installation, without resorting to containers (as in docker / singularity).*
