Linac2 and Linac3

D. Küchler for the Linac team

- Lists are based on old Excel sheets which represented the machine working sets
- Modifications done on the fly for Linac3 (Linac2 has its last year)
  - Add more tests for BI equipment
  - Restructure tests to avoid "not applicable" status
  - Second coordinator added (R. Scrivens)
- Tests mainly done by Richard and me, equipment groups not involved
- Due to the early start of the linacs the checkout page was not 100% ready and we debugged not only our machines ☹
- A table with all failed tests including comments would be useful
