Open, FAIR, and GO FAIR

Tuesday 29 January 2019 15:00 (20 minutes)

The 15 FAIR Principles have found unusually rapid uptake among a broad spectrum of stakeholders, from research scientists who make data, to publishers who distribute data, to science funders who track impact of data. Erik will describe the FAIR Principles, their relation to Open data, and review example implementations. Erik will also present a set of core FAIR Metrics that can help gauge the level of FAIRness of any digital resource. This discussion, and these examples will be presented in the context of the International GO FAIR Initiative. GO FAIR is a voluntary community of stakeholders devoted finding consensus on standards and solutions that comprise an emerging Internet of FAIR Data and Services.
