

# Production of high temperature superconducting Thallium-based thin-film coatings

AISHA SABA

A. Leveratto, R. Vaglio, M. Putti, C. Ferdeghini, C. Bernini, E. Bellingeri  
CNR-SPIN, Genova ITALY

A. Moros, S. Hollies, J. Bernardi, M. Eisterer

TU-WIEN, USTEM, ATOMINSTITUT, WIEN, AUSTRIA

Electron Image 220

Pellet shows big grains and XRD pattern shows the phase (1223) is almost pure. \* is Tl(1212) phase.

## 1. Silver Substrate

Silver rod is being used to roll to get substrate  
(80, 100, 130 micro meter)

Annealing at high temperature to stabilize the substrate for  
high temperature treatment of the thin films

## 2. SrTiO<sub>3</sub>

Commercial substrates

Deposition of silver layer (20nm)

## Methods for depositing the thin film Precursors

- Fast
- Cheap
- Scalable
- Feasible
- Better

# Thallination of the samples

Thallium Oxide  
Powder

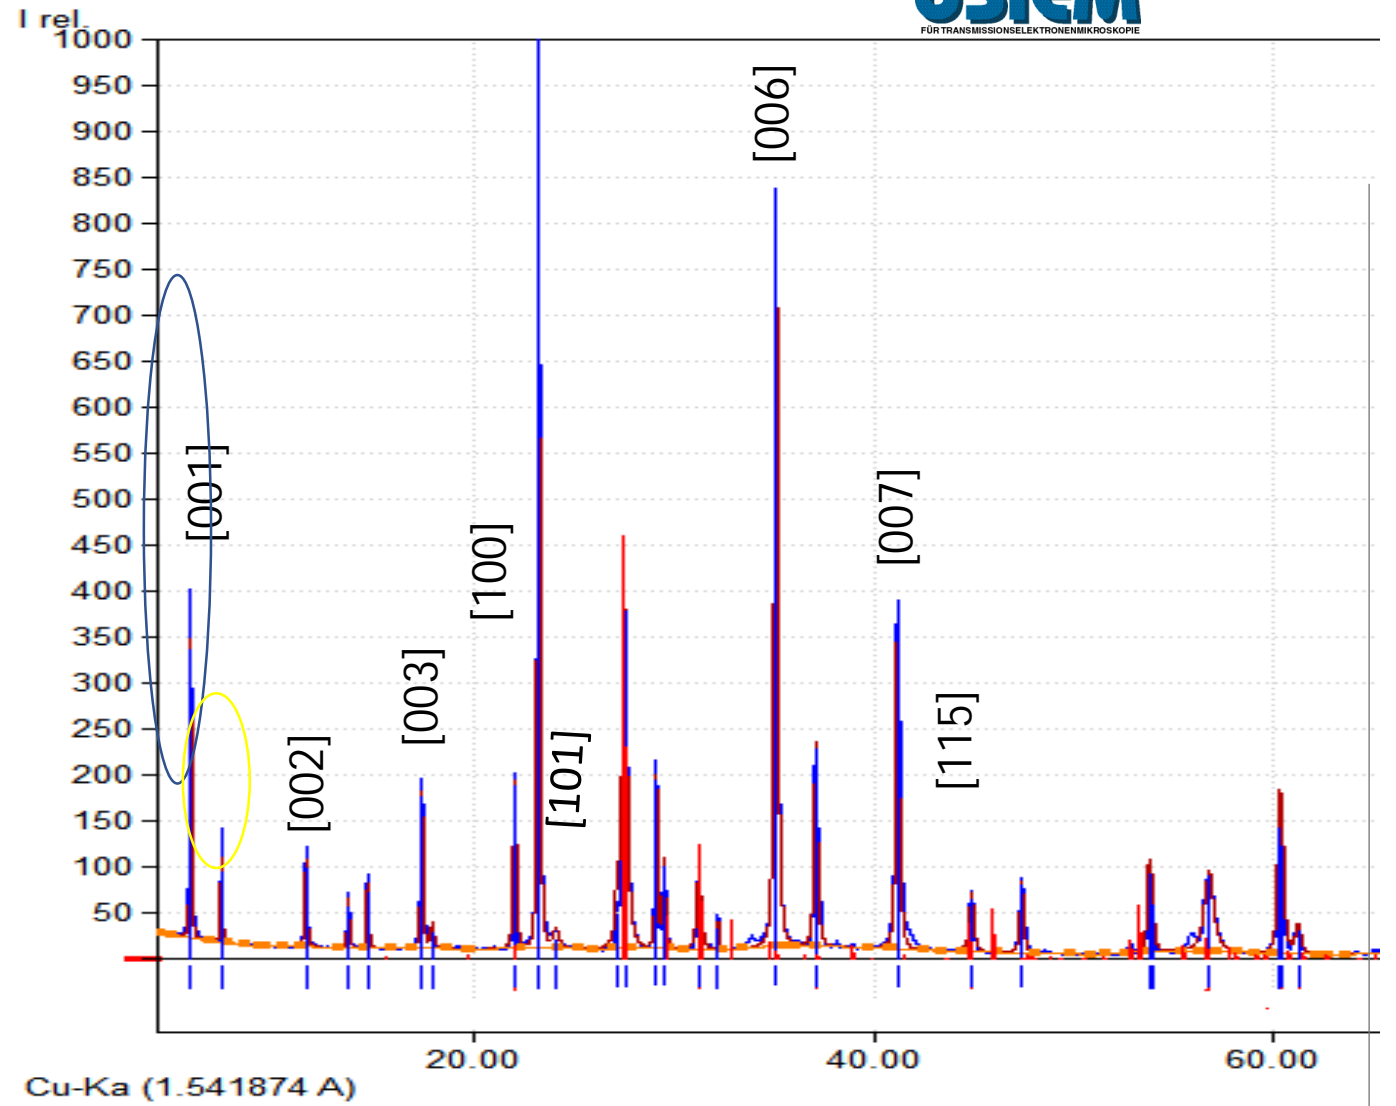

Thallium is volatile(717 C) and Toxic in nature

EASITrain – European Advanced Superconductivity Innovation and Training. This Marie Skłodowska-Curie Action (MSCA) Innovative Training Networks (ITN) has received funding from the European Union's H2020 Framework Programme under Grant Agreement no. 764879

# Thin Film on the silver substrate

# Thin Film on the silver substrate

STI019\_12: EDX elemental mapping

Film thickness ~ 2 μm

Thallium Tapes

1223

## Other activities

- Ph.D Course work
- Italian language course

---

### • Secondment at CERN

- if any volatile materials are released in vacuum (TI-1223 contains Tl, Ba, Sr, Ca)
- SEY( With Carbon Coating)
- XPS

Thank you
