AD Physics in 2007 and beyond

Wednesday 24 January 2007 09:05 (20 minutes)

The AD is delivering p-bar beams since quite some years by now to serve four different experiments studying both basic and fundamental physics as well as applications in actuarial survival rates of cells when being treated with p-bars.

After a short introduction of the experimental set-ups the essential goals will be presented with an outlook for upcoming activities.
