Operations of the North and East Area and CNGS

Wednesday 24 January 2007 14:20 (20 minutes)

In this contribution, the operation of the NORTH AREA, CNGS and PS EAST HALL will be discussed. The operation is organised in a close collaboration with the secondary beam line physicists who take care of the lay out and the setting up of the different lines. Frequent changes in the beam lines, conflicting user demands and special devices (magnetic horns, spectrometers, special counters etc.), makes their expertise indispensable. The problems encountered during daily operations and an evaluation of the new controls will be presented.

Author: CORNELIS, Karel

Presenter: CORNELIS, Karel

Session Classification: Session 6: Experimental Areas North, East and CNGS

Track Classification: Operations in 2006 and 2007 for East and North Area
