The OSiRIS Project: A Multi-institutional Ceph Storage Infrastructure

Thursday, October 11, 2018 2:25 PM (25 minutes)

The NSF-funded OSiRIS project (<http://www.osris.org>), which is creating a multi-institutional storage infrastructure based upon Ceph and SDN is entering its fourth year. We will describe the project, its science domain users and use cases, and the technical and non-technical challenges the project has faced. We will conclude by outlining the plans for the remaining two years of the project and its longer term prospects.

Desired length

20 minutes

Primary authors: MC KEE, Shawn (University of Michigan (US)); MEEKHOF, Benjeman Jay (University of Michigan (US))

Presenter: MC KEE, Shawn (University of Michigan (US))

Session Classification: Storage & Filesystems

Track Classification: Storage & Filesystems
