Measurement of W and Z boson production in pp at $\sqrt{s} = 7$ TeV with the ATLAS detector

Thursday 22 July 2010 09:50 (17 minutes)

The first measurement of the production cross-sections for W and Z bosons in proton-proton interactions at $\sqrt{s} = 7$ TeV are reported from the ATLAS experiment. Based on its excellent capability for reconstructing both high p_T electrons and muons, the electron and the muon decay modes of the W/Z bosons are compared. First results for the ratio of W/Z production and of W^+/W^- production will also be described.

Author: Prof. LEFEBVRE, Michel (University of Victoria)

Presenter: SERIN, Laurent (Laboratoire de l'Accélérateur Linéaire (LAL) (IN2P3) (LAL))

Session Classification: 02 - The Standard Model and Electroweak Symmetry Breaking

Track Classification: 02 - The Standard Model and Electroweak Symmetry Breaking
